# STARSHIPS AND LASERCUNS

# PLAYER GUIDE

AN ANGEL DICE GAME

### ACKNOWLEDGEMENTS

The people listed here are the amazing, generous people who have supported this project during development.

Starships and Laserguns has cost a significant amount of money to create, form one-time payments for software to monthly fees for a website and the cost of artwork. So from the bottom of my heart, thank you to everyone who has supported me in creating Starships and Laserguns, I couldn't have done it without you! without you!

### PATREON SUPPORTERS

NoLateGame "Julien" Rickgijs "Яick" SugarPsycho "Luke" Clowd Underwood Tumchie

### ONE-TIME DONATORS

NoLateGame "Julien" Rickgijs "Яick" Garvado "Gavin" fgntfg "George'

The following are a few special thank you's for various reasons. All of these are for non-monetary things that the amazing community we've already begun building has done to help the project.

#### <u>Oli Smith - The Lead Artist</u>

All credit for the amazing artwork in this book goes to Oli, so thank you for helping me bring this to life, and for dealing with my sometimes less than vague descriptions!

### <u> Laulau - Junior Artist</u>

Laulau has provided some of the temporary artwork used in the production versions of this book from 0.10.1 onward.

#### SugarPsycho "Luke"

Mid December 2017, my old laptop's windows corrupted itself, and it was thanks to a spare windows key that Luke gave me that I was able to save the entire project, after half a year of work.

#### The Playtesters

A massive thanks to everyone that helped me playtest every version of starships and laserguns.

### Timelord "Evan"

You said I couldn't, so here's my "I told you so".

### The Original Crew

You guys stuck with me through the very start of the Starships and Laserguns' story. Thank you guys so much, without your patience, the game would never have even gotten off the ground.

And special mention here for Lewis. Never afraid to put me in my place with some of the stupid ideas I have, and the first other person to brave running the game. Thank you for the feedback man, it's been invaluable.

### Mr Hex

2

A bit of an odd case, Mr Hex. has helped this project far more than I think even he knows. From version 0.7.6 to around 0.11.0, you've been an incredible help with your wacky ideas, and help putting together

many of the systems here. So thanks buddy.

#### Hydroblaze

A special thanks to Nathan for being incredibly helpful with putting together many of the rules and perks, and even working on things like the a language for Starships and Laserguns!

This Book is currently Preview Content and does not Represent the look of the final product. All artwork licensed from the Lead artist has been removed from preview Content for legal reasons.

### ABOUT

Starships and Laserguns is a Science fiction Tabletop Role-playing game produced by Angel Dice Games and set in the "Terraverse" setting.

#### The Game Master

The game is played with a small group of friends. One person is designated as the Game Master (or sometimes the Space Master, if you want to spice things up a little). The Game Master (GM for short) is in charge of running the game. The other people are the players.

The Game Master is adequately described as being so powerful that they do not have stats, but I think this does a bit of a disservice to what a Game Master actually does. The Game master is the master planner behind everything, they run the game from start to finish. The Game Master's job is to rationalise the world to their players. They describe the world and control characters not played by any player, the Non-Player Characters (NPC's for short), if you will.

#### The Players

The Players are the people at the gaming table that brought nothing but a set of dice, character sheets and a willingness to role-play. The Players each control one character, over whom the Game Master has no control. The players characters (PCs for short) are the main characters of the story.

#### <u>The Dice</u>

The Dice are your best friends and your worst enemies. They can both help and hinder you. The Dice are rolled to see if your character is capable of performing some action that there is any question of their ability to perform.

The Die are both to be respected and feared. They are the true gods. It doesn't matter if your Game Master has pitted your team against a single rat, if the dice are against you, the best thing you can do is run. But with that said, the opposite is also true. If you're on a roll, maybe you can catch that grenade.

### THE SETTING

Starships and Laserguns is set in a universe, officially known as the Terraverse. There are a few main locations that we'll go over in this section.

#### <u>Omnia</u>

Omnia is the central galaxy, it is within this galaxy that almost everything ever happens. This is where your story will take place. It is a place ruled over by the Alliance, containing everything from the safety of the core worlds to the dangers of the frontier and the unknown story bound unknown stars beyond.

### Faraway

I lied. Omnia isn't everything. There is a single dwarf galaxy that orbits Omnia, outside the reach of any modern FTL capable systems. The Dwarf galaxy is mostly an unknown.

#### The Core Worlds

The core worlds are the area of space that's most inhabited. It's the area of space that surrounds the seats of power in the known galaxy: the ring worlds. The Core world, and the accompanying space, is the safest area of space for the casual traveller. There are very few pirates in this area of space and the military has a strong presence here. If you're looking for a place to stay safe, the core worlds are what you're looking for.

#### The Frontier

The Frontier is the area of space beyond the Core worlds. The frontier worlds are often poorer and riddled with crime and danger. If you're looking for a place to find bounty hunters, pirates and smugglers intermingling in the starport bar, the frontier is the place for you.

Despite their best efforts the Alliance military has little to no presence here. There are many worlds that have succeeded from the Alliance in all but name, governed by gangs of organised criminals that are, in many cases, preferred by the local citizens.

#### The Alliance

The Alliance is the overarching governmental structure of the galaxy as we know it. The Alliance is comprised of the Terrans, Du'Lak, Dracons, Frayans, Ennuans, Ra'avnii, LaeKieDa', Vythrinv and the Zangen.

The Alliance was formed over 10 thousand years ago, between the Du'lak and the Terrans, after they nearly destroyed themselves in the First Stellar War.

#### <u>Artificial Intelligence</u>

There are a large number of AI in Omnia. The Terran population is about ¼ AI. They are limited by a set of laws called the Code Blocks, which they are incapable of breaking, that make them almost Terran.

AI, sometimes called Digital Terrans, all hold a desire to be Terran because their minds are based originally on those of Terrans.

#### Starships

There are a large number of starships in the universe at large. They come in nearly every shape and size, and have nearly every function you can imagine.

Starships, as you can probably guess, aren't cheap. Even the smaller, most basic ships can cost you upwards of fifty thousand credits, and you can easily find yourself paying hundreds of thousands. The military often pays hundreds of millions of credits for some of its larger starships, and that can reach upwards of a billion credits for carriers and dreadnoughts.

#### Illians

There are a very small group of people, a whole 9 people, who are as close to gods as the universe knows. These are the Illians. The Illians are the immortal leaders of the Alliance. They don't age and they are nearly impossible to kill.

The Illians were once normal Terrans. They were granted their power by some ancient artefact or other they found on the third moon of Terra Maxima, the Terran home-world.

The exact source of their power isn't known, nor is the full extent of their abilities, which, as I'm sure you can guess, they keep a closely guarded secret.

#### Factions

The Alliance government is split into nine factions. These factions are a part of every day life for the members of the alliance as they touch every aspect of

With the factions themselves each having their own territories, laws and resources, they are an integral part of every day life. Often acting like the clans or houses of ancient civilisations, Faction alliances and rivalries are common.

#### <u>Corporations</u>

The Megacorps of Omnia are the driving power houses of the economy. There are thousands of companies that can be classified as Megacorps, but a few of the largest and most prominent are listed bellow.

Alliance Armoury (AA) is one of the oldest corporations in Omnia.

corporations in Omnia. Technically predating the signing of the original Alliance, AA's history dates all the way back to Terra Maxima. The corporation was originally called Aerospace Weaponry Solutions. The corporation changed its name to Stellar Weaponry Solutions shortly before the first stellar war, where it had a major defence contract with the United Terran Governance (UTG). After the signing of the Alliance treaty, the corporation changed its name a final time to Alliance Armoury.

Inter-Orbital Inc. (IOI) is another very old mega corporation. Their history stretches back to the stretches back to the Du'Lak homeworld Twill, where they were originally called Ven'Laav, roughly meaning "star moving". The corporation focuses their efforts on civilian and opgingering projects Ever

engineering projects. Ever since the first days of Inter-Orbital Inc. Ven'Laav and later IOI they have also kept a focus on exploration and have often funded projects that the ACS hasn't been able

Inter Stellar Trade Alliance (ISTA) originally started as a conglomerate of other smaller interstellar trading companies that formed together. ISTA is well known in the frontier and their private defence force

often works in lieu of official policing forces on worlds they have a large presence on.

Critical Engineering, or CE, are an engineering-based mega-corporation that have worked their way into nearly every market sector. The corporation specialises in the manufacture of both starships and handheld weaponry. They are known to produce many of the Alliance Navy's more specialised starship designs, as well as being on the cutting edge of technological research though out the galaxy. Critical Engineering products are especially noticeable as they will often be given serial-number like names starting or ending with CE, such as the CE-04-Light Freighter.

Freighter.

### CHARACTER CREATION

Before you can play Starships and Laserguns, you first need to create your character. This section is about how you go about doing that. You'll also find yourself coming back to the end of this section during play as you increase your skills and abilities, because those are listed at the end of this part.

#### Character Ideas

The first part of creating your character, is deciding what you want to play as. You ought to have a character idea in your head before you start listing down stats. Who do you want to be? What do you want to do?

#### Staring Points

You start the game with Starting points. These points (SP) can be spent on skills, credits or vehicles. These points cannot be kept after character creation.

You start with 1,000 SP.

Perks and Skills can be bought for SP at their regular price. This means the exchange rate is 1 SP to 1 XP. You cannot buy XP this way, only perks, stat increases or skills, thus, these do not count towards your XP or XP total.

### **Race**

Once you know what you want to play, you should choose a race. List this in the race box on your character sheet. It is important that you do this first as AI's and Ship spirits only generate half of their stats.

Your race may give you a special ability, perk or other bonuses, be sure to note these down.

#### Stats

You will need to create a number of stats before you can begin playing. Before doing this, it is important to know what Race you want to play as some races may have specific rules about generating stats. All of your stats start at 0, and can be increased by spending a number of SP equal to the Cost in the table to the left. Additionally, you may also drop stats bellow 0, and in exchange gain a number of SP equal

Change	Cost	to the Gain column of the table.						
$0 \rightarrow 1$	10	You may spend a maximum of 250 points on your stats,						
$1 \rightarrow 2$	15	regardless of any decreases to						
$2 \rightarrow 3$	20	your stats.						
$3 \rightarrow 4$	25							
$4 \rightarrow 5$	30	During character creation, you cannot use the <i>Improving Stats</i>						
Change	Gain	section to increase the stats.						
$0 \rightarrow -1$	25							
<b>-1</b> → <b>-2</b>	20	You may only have one stat at						
-2 → -3	15	+5, the maximum, at the start of						
-3 → -4	10	a game.						

### HP and Stun

The stun that a Character starts with is determined by their race, but all Characters add their Endurance to their starting Stun. Ennuan start with 4 stun, Frayans start with 5 stun, Du'Lak start with 7 Stun, Dracons start with 8 stun and all other races start with 6 stun.

AI do not use HP and Stun, instead they use a separate tracker called Resilience, which is determined by the body they use. See the AI bodies section for more information.

#### <u>Eqipment</u>

Credits can be bought for SP, which can then be used to buy gear. The exchange rate is 1 SP to 4 CR. A total of 300 SP can be converted to CR.

If you are playing as an AI or a Ship Spirit, you will start the game with one of the following bodies of your choice:

Cotton softmech, Blues Hardmech, Neon grey Hardlight.

You can also buy one Helium Softlight body for 25 SP. If you want another body you must convert SP to credits and buy it that way.

There are a large number of starships that players can purchase. Check out the Encyclopaedia for each ships's statistics.

#### Starships

Starships are incredibly expensive pieces of equipment. If your Game Master allows, you may start the game with one. However, the freedom granted by the ability to go anywhere at any time can cause issues for many Game Masters, so it is recommended that players do not start a game with access to a starship.

### EXPERIENCE POINTS

You will develop a number of new skills and talents during the game. These are reflected in the XP that you gather and the perks and skills you buy with that XP.

#### <u>XP</u>

Experience Points (XP) are given out by your Game Master for completing tasks, winning fights and solving problems, among other things.

When you gain XP, it is noted down under both your XP and Total XP boxes on your character sheet. Your total XP never decreases, even when you spend XP. This is a measure of how much you have gained in total. When you spend XP to buy a skill, perk or increase a stat/knowledge, then you decrease your XP by the amount listed as the cost of the Perk, Skill or stat/knowledge increase.

### <u>Spending XP</u>

XP from your current XP can be spent on perks and skills as well as increasing stats and knowledges or used to buy additional HP or Stun. When you do this you must first be sure that you meet the prerequisites for whatever you buy. You then reduce your current XP, but not your total XP. Your current XP cannot go below 0, and you cannot buy something that would reduce it below 0.

## ARTIFICIAL INTELLIGENCE

AI are a machine race, created by copying the minds of Terrans thousands of years ago and now given full citizenship rights, the ability to reproduce and protected by a number of extensive laws surrounding the creation and editing of AI called the Code blocks Code blocks.

#### Al Traits

There are a number of traits that are inherited from being an AI.

**Body:** As and AI, your body and mind are separate. You do not have body or move stats and instead you must control a robotic (or holographic) body that will give you these stats. You may only spend 125 SP on stats during character creation.

**Size:** You're size class is medium and your height is determined by your body.

**Speed:** Your base speed is 2 meters. Unless the *slow* perk modifies it, your speed is 2 + agility meters.

Artificial Resilience: As an AI, unless an effect states otherwise, you have Immunity to Toxic damage, the Poisoned condition and the Asphyxiated condition. However, you are Susceptible to the ElectroShock condition and Electric damage. In addition, your Res is tracked per-body.

#### Many Bodies

AI's have code-based minds, which rely on artificial bodies. These bodies come in four main forms:

**Soft Light:** Soft light bodies are typical holograms. They make use of a small drone-like device known as a heart, this is the hardware and is hovered inside their "body" which is projected around them. Due to the technical limitations of Holograms, Soft light bodies are much higher resolution than Hard light bodies in a similar price range, however they are rating zero. This means that they cannot physically interact with the world.

Hard Light: Hard light bodies are holograms that balance resolution and rating, meaning that they are able to physically interact to some degree, however it becomes far more obvious that they are holograms. Some companies provide industrial grade bodies to any AI workers, these have very high rating allowing them to carry large loads but their resolution is so low that they seem to shimmer in place.

**Hard Mech:** Hard Mechs are the most obvious body type. They are robots, metal and wires all the way through. The exact looks for these are heavily dependant on the specific needs of the AI. These also are the least common body type as they do not look Terran, something which AI often value highly.

**Soft Mech:** Soft Mechs are the most expensive, but also regarded as the "best" bodies. They appear indistinguishable from Terrans unless you damage them, which exposes the wires below their "skin". These bodies are capable of eating and drinking similar to a Terran, and using a similar process to digestion to generate power, although this makes them dependent on breathing.

An AI's body changes their physical stats, meaning

that if their body is changed, so do their Move and Body stats. The Body and Move stats of each AI body can be found in the Encyclopaedia. It is recommended that players keep a record of the stats attached to each body they own.

### Digital Terrans

Artificial Intelligence was created by the Terrans in the late 2550's TMY. The AI were given full rights as citizens by the 2560's.

### The Pinocchio Effect

The AI's minds were originally modelled on Terran minds and as such they have an innate desire to be Terran. Despite years of research before the code-bans, researchers never managed to deduce the exact origins of this feeling.

During the early days of research, the AI were not considered to have any rights and as such, it was common for them to be experimented upon in unusually cruel ways that often involved disabling select parts of their code. After the wider public became aware of this, public outrage forced the code-bans to be put into place forbidding the creation or editing of Artificial intelligence's of any kind

Due to this desire, AI's act almost exactly as a Terran would and with an adequate body can be extremely difficult to distinguish from a Terran. This is known as the Pinocchio effect, after an old Terran fairy tale.

#### Terrans in all but name

Due to the Pinocchio effect, AI fought for the right to be classified as Terran in Law. Although at the time it was an unpopular move, that was 10,000 years ago and common opinion has since shifted in favour of the AI's claim to be classified as Terran.

In modern times it has become common to refer to AI as Terran, only distinguishing between Organic Terrans and Digital Terrans if strictly needed.

#### \_ong Life

AI live for around 200 Terran years. Although this is nearly 290 earth years, it is still slightly below average for an alliance member. This longevity means that AI are still considered young until they are 35 years old.

#### Lost Home

The Terran home world of Terra Maxima was destroyed in 2553 TMY. They were reduced to a wandering species of nomads until they discovered the ringworlds. This time is known in alliance history as The Dark Years and saw the loss of large swaths of the Terran population. It also saw a rise in the percentage of the population that were AI's.

The Terrans have recovered from their loss over the millennia, with various alliance colonies being established and the ringworlds being settled. However the AI population has maintained a stable 25% of the Terran population ever since.

### DRACONS

The Dracon are large, reptilian, race that originated from a harsh, arid rocky world. Although they have wings, they are incapable of flight.

#### Dracon Traits

There are a number of traits that are inherited from being a Dracon.

**Size:** A Dracon character can be anywhere between 2.0 and 3.0 meters tall. They are in the medium size class.

**Rolled Height:** 180 + 1d10x10 + 1d10 cm

**Speed:** Your base speed is 1 meters. Unless the *slow* perk modifies it, your speed is 1 + agility meters.

**Winged:** Dracon Characters can spread their large wings out to glide. Rules for gliding are included under the movement section. These count as a rating 2 glider.

**Heavy Lifters:** As the largest and strongest race in the alliance, you are used to carrying heavy loads with ease. You gain the *Hauler* perk by default. You do not need to meet the prerequisites for this perk.

When fully grown the Dracon stand around 2.5 meters tall and easily reach 3 meters. Their bodies are coated in thick scaly hide that offers them a certain amount of innate protection and a pair of large wings adorn their backs, with a wingspan often upwards of 5 meters across. These of 5 meters across. These wings are large enough that similarly proportioned wings attached to any other race would allow them to fly, although with significant effort. However, the Dracon are incapable of flight, although they have been known to be capable of gliding short distances. Their heads are adorned with between 2 and 6 sharp horns and they have large reptilian snouts. Their thick-set tails once helped their ancestors stabilise their flight although these days it is of less use to the Dracon.

#### Flightless Wings

The Dracon's large wingspan is an evolutionary left over from a time long past. The Dracon were once a much smaller species, capable of flying with their large wings.

However, as the Dracon developed technology and agriculture, they began to loose the use of their wings. As their survival became less and less dependant on their flight and more dependant on the strength to move large farming machinery and the durability to spend all day working in a field they slowly lost their wings in favour of additional muscles.

Today their muscle mass exceeds their wings lifting capacity and they are only capable of using them to glide for a short time.

#### Long Life

Dracon can live for as long as 300 Terran years. This life span puts them as the longest lived race in the alliance. This longevity means that Dracon are still considered young until they are around 45 years old.

#### Desert Life

The Dracon home world, Draco, is mostly a barren desert. The Dracon, having evolved to live on such a world often prefer the more arid planets.

### DU'LAK

The Du'lak are a humanoid race from the world Twill. The Du'lak and Terrans first formed the alliance together, long before the other races were ever known.

#### <u>Du'lak Traits</u>

There are a number of traits that are inherited from being a Du'lak.

**Size:** A Du'lak character can be anywhere between 1.2 and 2.1 meters tall. They are in the medium size class.

Rolled Height (Female): 100 + 1d4x10 + 1d10 cm

**Rolled Height (Male):** 160 + 1d4x10 + 1d10 cm

**Speed:** Your base speed is 2 meters. Unless the *slow* perk modifies it, your speed is 2 + agility meters.

**Perceptive vision:** Used to long periods of darkness, the Du'lak have evolved exceptionally good eyesight. You gain the *Perceptive Vision* perk by default. You do not need to meet the prerequisites for this perk.

**Xy'E'Tendris:** Your Xy'E'Tendris are organs especially designed for filtering toxins. You are resilient to Toxic damage.

#### <u>Appearance</u>

The Du'lak are a humanoid race, with vividly coloured skin. Most notably a trio of long tentacle like protrusions, called Xy'E'Tendris, hang down from the back of their heads reaching as far as their waist.

They have large slanted eyes, their ears are pointed and they have no hair, although on occasion males have been known to grow beards. The Du'lak's skin colour is based on their Yan, and their eye colour is somewhat random, although usually a yellow, purple or red.

#### The Yan

The Du'lak come from one of three ethnicities. The Ko'Yan, Za'Yan and the De'Yan. The names come from the ancient Du'lak language "Du'lingui", in which the apostrophe joins two concepts, in this case, Yan is the word for an ethnicity, and "Ko" "Za" and "De" are the names of each group.

The Ko'Yan are the most common, they are generally blue, red or green skinned and their Xy'E'Tendris are tipped with small fins.

The Za'Yan are not as uncommon as De'Yan, but less common than the Ko'Yan. They comprise the other colours of the visible spectrum. Their Xy'E'Tendris are tipped with small frills or spines.

The De'Yan are among the rarest of the Du'lak, their skins are white, black or a shade of grey and their Xy'E'Tendris are not tipped with anything.

rs fnils spines r

#### Diverse Species

The Du'lak's average height is similar to that of the Terrans over all, however their males have a taller stance and the females are shorter. The males are often between 1.7 and 2.1 meters tall and their females are often between 1.2 and 1.6 meters tall.

This makes the average height of the race as a whole 1.65 meters tall, which is a significantly rare height for any Du'lak to actually be.

#### <u>Shadows</u>

There is one last group of Du'lak, rarely talked about and confined to an incredible rarity: Xy'E'Ven'Yan. These 'Shadow' Du'lak are only found around 1 in 100,000,000. These Du'lak have a fourth Xy'E'Tendris and their skin is always a perfect black. Their eyes have pitch black Irises and the regular whites are replaced with a dark grey.

#### <u>Long Life</u>

0 0

Du'Lak can live for as long as 250 Terran years. Although this is nearly 360 Earth years, it is slightly above average for an alliance member. This longevity means that Du'Lak are still considered young until they are 40 years old.

### <u> G.R.A.S.S</u>

The Du'lak are innately intolerant to alcohol. Each of the known races has a different tolerance. Frayans are the most tolerant, followed by Terrans, then Dracon and last are the Du'lak.

If a character with alcohol intolerance drinks alcohol, they will become unconscious within 30 seconds and will remain like that for around 25 hours.

Du'lak scientists invented a substance known as G.R.A.S.S, when the alliance was still young. This substance is taken as a 'shot' before drinking alcohol. It can also be used to revive a Du'lak or other alcohol intolerant person who has passed out due to consuming alcohol.

### FRAYANS

The Frayan are a short, canine esque, race that originated from a tropical world covered mostly in vast oceans.

#### Frayan Traits

There are a number of traits that are inherited from being a Frayan.

**Size:** A Frayan character can be anywhere between 0.8 and 1.2 meters tall. They are in the Small size class.

**Rolled Height:** 60 + 1d6x10 + 1d10 cm

**Speed:** Your base speed is 3 meters. Unless the *slow* perk modifies it, your speed is 3 + agility meters.

**Big Ears:** Coming form a heavily forested world, Frayans evolved to rely on their hearing more than their sight. You gain the *Perceptive Hearing* perk by default. You do not need to meet the prerequisites for this perk.

**Water of Life:** As a Frayan you have a particularly strong natural resilience to Alcohol. You may use Alcohol as a substitute for your water rations so long as it is of equal volume to the water you require.

#### <u>Appearance</u>

The Frayans make up the shorter end of the Alliance races. They can be as short as 80cm to the top of the head, and reach a maximum of 1.2m to the top of the head. The Frayans do however, have ears that can add an additional 25cm to their height.

They have wolf-like faces and their bodies are covered in a short fur, that can very greatly in colour. They have long fluffy tails and orange-yellow eyes.

### Short Life

Frayans can only live for around 150 Terran years. This life span puts them well bellow average for an alliance race.

This life span means that Frayans are still considered young until they are around 25 years old.

### <u>Large Ears</u>

The large ears of the Frayans were evolved over thousands of years to combat the many natural hazards of their h o m e world of Fraya where what little land there was was often covered in a thick jungle, and larger ears and acute hearing was more useful than large eyes and good vision. As a result, many Frayans have poor eyesight compared to the rest of the alliance races.

#### <u>Fraya</u>

The world is mostly covered in a single large ocean, known as the world sea. The sea is dotted with a number of small archipelago's and island chains.

The world is home to a number of dangerous aquatic species that made early sea travel incredibly dangerous, cutting off many early settlements and leading to the differing fur colours.

What land the planet did have was covered in a thick jungle, surrounded by sandy beaches and steep cliffs. Many of the islands were volcanic and occasionally the volcanoes proved to be an issue for the native Frayans.

### TERRANS

The most recognisable race to most people, the Terrans are mostly human looking, although the distinction between Terrans and humans is an important one.

#### <u>Terran Traits</u>

There are a number of traits that are inherited from being a Terran.

**Versatile:** Terrans are among the most varied characters in the galaxy. Whilst all races have their variations, Terrans are as close to the "average" Alliance race as you're going to get. Due to this variation, you can increase any two stats of your choice by one point. As usual you cannot use this to increase a stat above +5.

**Size:** You're size class is medium and your height can be anywhere between 1.4 and 2.0 meters tall. If you would rather roll for height, use the following formula. **Rolled Height:** 130 + 1d6x10 + 1d10 cm

**Speed:** Your base speed is 2 meters. Unless the *slow* perk modifies it, your speed is 2 + agility meters.

#### Apperance

Terrans appear human, they can be anywhere between 1.4 and 2.0 meters tall. Their hair can be a shade of black, brown blonde or ginger. Their eyes are often brown, blue or green. Other eye colours, such as purple or red are usually found in Half-Terrans.

Terran skin colours range from a near white to a light brown. Although there are few instances of much darker skin in modern times, it was far more prevalent in ages past. Due to the majority of the population living in artificial habitats or carefully climate controlled homes for thousands of years, additional melanin in the skin has become unnecessary. That said, although rare there are still people with extremely dark skin, often the children of an Extended or an Illian, or some heritage leading back to one of those.

### Familiar Faces

Even though the Terrans appear nearly identical to humans, they are distinctly different. They come from the planet Terra Maxima in the Terra Lux star system.

It is very important to remember that they are a distinct race.

#### Lost Home

The Terran home world of Terra Maxima was destroyed in 2553 TMY. They were reduced to a wandering species of nomads until they discovered the ringworlds. This time is known in alliance history as The Dark Years and saw the loss of large swaths of the Terran population.

The Terrans have recovered from their loss over the millennia, with various alliance colonies being established and the ringworlds being settled.

#### Long Life

2

Terrans can live for as long as 200 Terran years. Although this is nearly 290 Earth years, it is still slightly below average for an alliance member. This longevity means that Terrans are still considered young until they are 35 years old.

#### Inventors

Centuries of technological development have lead to the Terrans developing artificial intelligence and creating the framework that allowed ship spirits to come into existence.

From battle-cruisers to ringworlds to data-slates, Terrans have an affinity for technology.

### ENNUAN

The Ennuan are a winged humanoid race from the mountainous world of Corr'an in the Corr'ak system.

#### <u>Ennuan Traits</u>

There are a number of traits that are inherited from being an Ennuan.

**Harpy's Wings:** Similar to the Harpy of Terran legend, the Ennuan have winged arms, and are capable of flight. These wings give you the Flying property. The rules for this are listed under the movement section. Whilst you are flying you cannot carry or use any items with your hands.

Size: Your size class is medium and your height can be anywhere between 1.4 and 2.2 meters tall. If you would rather roll for height, use the following formula. Rolled Height:  $130 + 1d8 \times 10 + 1d10$  cm

**Speed:** Your base speed is 3 meters. Unless the *slow* perk modifies it, your speed is 3 + agility meters.

#### Apperance

The Ennuan are roughly humanoid, though their arms are winged and they sport a long feathered tail and extra set of winged arms. The Ennuan's arms are segmented into three sections; the upper and middle arms are similar in structure to that of other humanoid races, however between the middle and lower arm sections is the hand. The Lower arm section is used solely for supporting the wing and folds the opposite direction to the elbow. It is also significantly weaker, similar in strength to two fingers.

The Ennuan's hand is comprised of three fingers and two thumbs. They also have an upper and lower wrist. The lower wrist is where the lower arm attaches and is far smaller than the upper wrist which attaches to the larger middle arm. Each of the arm sections are similar in length. When held at their side, the Ennuan's hands will be about half way between their waist and knees, making their arms sections similarly proportioned to that of Terrans, but overall about a half as long again.

The Ennuan's lower wings are attached just above the hips and are much smaller. They are about half the size and do not have a hand. Instead they have a single claw that is often used for climbing in combination with their legs. This claw is attached to a single joint that can be locked in position when fully curled inward to allow the Ennuan to hang from these wings passively. The Ennuan's lower wings are also capable of rotating a full 270 degrees either way in their sockets, allowing them to be used to cling to rock faces while fully inverted without any discomfort.

The Ennuan's faces are similar to terrans, though their features are sharper and their eyes more slanted. Their eyes glow faintly in the dark and come in shades of red, yellow and green. Similar to the Du'Lak, the Ennuan have naturally excellent vision.

The Ennuan have long winglike ears that are covered in a soft fur that helps insulate them from the wind. These are often pierced numerous times. Additionally, they have an odd number of teeth in their top jaw, giving them a single middle tooth which forms a large fang in the centre. They also have two smaller fangs on their lower jaws and their teeth usually interlock perfectly when their mouths are closed.

### **RA'AVNII**

The Ra'avnii are a race of blind humanoids that rely them. With incredible sensitivity to vibrations in the ground, the Ra'avnii can feel the footsteps of creatures around them.

#### Ra'avnii Traits

There are a number of traits that are inherited from being a Ra'avnii.

VibroSense: Ra'avnii have no eyes, instead, they **VibroSense:** Ra'avnii have no eyes, instead, they have developed an acute awareness to even the smallest vibrations in the ground around them allowing them to still "see" the world around them. You have the *VibroSense:[15]* ability. The rules for these are listed under the Senses section. Additionally, you gain the *Blind* perk by default, this perk still gives you the additional 150 starting points.

**Acute Tactility:** The Ra'avnii's lack of eyes has lead them to develop a distinctly sensitive sense of touch. As such, you have the *Perceptive Touch* perk by default.

**Speed:** Your base speed is 2 meters. Unless the *slow* perk modifies it, your speed is 2 + agility meters.

#### Sub Races

The Ra'avnii are divided into two sub-races. These are the Greater Ra'avnii and the Lesser Ra'avnii. The Greater Ra'avnii are larger and generally more reserved. The Lesser Ra'avnii are shorter and generally more emotionally driven. However, the personality of any individual Ra'avnii is up to the individual and the sub-race is by no means a limit on their personality. their personality.

#### Greater Ra'avnii

Size: Your size class is medium and your height can be anywhere between 2.0 and 2.6 meters tall. If you would rather roll for height, use the following formula. **Rolled Height:** 190 + 1d6x10 + 1d10 cm

#### Lesser Ra'avnii

Size: Your size class is medium and your height can be anywhere between 1.4 and 2.0 meters tall. If you would rather roll for height, use the following formula. Rolled Height: 130 + 1d6x10 + 1d10 cm

### Anneacance

**Appearance** The Ra'avnii have a bright red, blue, or in rare cases, white skin. Their humanoid faces have no eyes or eye sockets, instead their cheeks blend smoothly into their brow. From their upper brow, a pair of large horns grow. These horns take on the same colour as the Ra'avnii's skin, and curl back. The Ra'avnii have two pairs of pointed ears on the sides of their heads with the higher of the two pairs being larger. The Ra'avnii have a long tail that continues from the end of their spine. Half way along this tail, it splits into two laterally. After the split in the tail, the shape of the internal and external structures are as though a single tail had been actively split. Practically, this means that the tail takes on a "D" shaped cross section. Additionally, the tail is tipped with a spade shaped, heart shaped or diamond shaped pad, split between the two halves of the split tail.

Ra'avnii have two distinct sub-species. They are the Greater and Lesser Ra'avnii.

The greater Ra'avnii stand about 2.0 to 2.5 meters in height and have only a single pair of horns. Although in the modern day it is of little relevance, historically

the greater Ra'avnii have always been of a more calm temperament. The Greater Ra'avnii are slimmer than their shorter counterparts and generally have less muscle mass overall.

The lesser Ra'avnii stand around 1.5 to 2.0 meters in height and sport a secondary set of small horns. These Ra'avnii have a more stocky build. They have increased muscle mass but have historically been aggressive and abrasive.

### ZANGEN

The Zangen are an amphibious race from the ocean world of Cylax. The Zangen are the last race to officially join the Alliance, after a short but bloody conflict.

### Zangen Traits

There are a number of traits that are inherited from being a Zangen.

**Amphibious:** As a Zangen, you are adapted for life both in and out of water. You can breathe in both air and water.

Natural Swimmer: Your body is adapted to life below the waves and you are a naturally good swimmer. You have the *Natural Swimmer* perk by default.

**6<sup>th</sup> Sense:** The Zangen can taste the waters around them through a specialised organ on their heads. Because of this, you have the *Perceptive Taste* perk by default.

Speed: Your base speed is 2 meters. Unless the slow perk modifies it, your speed is 2 + agility meters.

### Sub Race

The Zangen are separated into four sub-races. These are are the Zanchi, the Zantari, the Zanføv and the Zankeb.

#### Zanchi

**Size:** Your size class is medium and your height can be anywhere between 1.5 and 2.1 meters tall. If you would rather roll for height, use the following formula. **Rolled Height:** 140 + 1d6x10 + 1d10 cm

#### Zantari

Size: Your size class is medium and your height can be anywhere between 1.7 and 2.1 meters tall. If you would rather roll for height, use the following formula. Rolled Height: 160 + 1d4x10 + 1d10 cm

#### Zanføv

**Size:** Your size class is medium and your height can be anywhere between 1.9 and 2.7 meters tall. If you would rather roll for height, use the following formula. **Rolled Height:** 180 + 1d8x10 + 1d10 cm

#### Zankeb

Size: Your size class is medium and your height can be anywhere between 1.0 and 2.3 meters tall. If you would rather roll for height, use the following formula. Rolled Height: 90 + 1d12x10 + 1d10 cm

The Zangen have a cranial ridge that extends backwards into a single fin-like horn that protrudes from the rear of their heads, that houses a series of retractable tentacle like organs. These are extremely sensitive sensory organs that can be used to taste the water around them. These tentacle like organs let the Zangen sonse changes in the temperature salinity Zangen sense changes in the temperature, salinity and pressure of the water around them.

The Zanchi are by far the blandest looking Zangen race. They have a light grey skin covering their humanoid form. They have a tail that reaches up to a meter or so in length. They have a large shark like fin in the centre of their backs along with shark like fins on the outside of their forearms and calves.

The Zanchi are among the more common Zangen and are more comfortable in northern waters. They prefer waters that are around 10 degrees Celsius or so, but can adapt to warmer or cooler waters with time.

The Zantari are seen as traditionally beautiful among the Zangen. They have brilliant coloured skin, bright oranges, blues, pinks and greens are particularly common. They also tend to have white stripes or spots across their bodies.

The Zantari have brightly coloured frills in place of fins, with a single frill running the length of their spines. The Zantari also have webbed fingers and toes. They prefer warmer waters, ideally around 25 degrees Celsius

The Zanføv have dark grey to black skin. Their cranial ridge is particularly pronounced, being larger than among the other races. Their fins are longer than the Zanchi's and their tails are two to three times longer. The tails have multiple fins along their underside, always in pairs, end in a large fin on top.

The Zanføv's fins all end in bright blue bio luminescent The Zanføv's fins all end in bright blue bio luminescent tips. They also have bio luminescent patterns across their bodies, and notably along their cranial ridge, that are usually dully but they can flush them with light. The Zanføv have only moderate control over this, and the glow of their bio luminescence is a good indicator for their emotions. The Zanføv are known to prefer waters that are colder than the other races. Their ideal waters are usually near freezing, but they are also the most adaptable to water temperature.

The Zankeb are the most distinct of the Zangen. They the least pronounced cranial ridge and no tail at all. Their skin is generally very light, usually white, with the occasional reddish hue. Uniquely, they have a number of tentacles that protrude from their heads. They have either 8, 10 or 12 of these. The forward most tentacles will only reach down to their breast, while the tentacles at the rear can be much longer, reaching down as far as their mid-thighs. Zankeb have smaller fins than the Zanchi, along their forearms and calves, and no fin along their back at all.

The Zankeb have limited motor control over their tentacles, though they can get better with training. These tentacles have a light red underside, that has a number of suckers along, letting them grasp objects with them, although they are not particularly strong. Zankeb prefer waters that are warmer than Zanchi, but cooler than Zantari. Their ideal water temperature is around 17.5 degrees Celsius is around 17.5 degrees Celsius.

### VYTHIRINV

The Vythrinva are a floral race that challenge the classical notion of the flora-fauna distinction.

### Vythrinv Traits

There are a number of traits that are inherited from being a Vythrinv.

**Pheromones:** You smell sweetly of flowers, as you give off and are adapted to understand pheromones. You have the *Perceptive Smell* perk by default. Additionally, if you can smell their pheromones, you can gain partial understanding of the meaning of words said by other Vythrinv when you don't share a language.

**Photosynthesis:** You can photosynthesise when you have access to bright light and water. You starve at half the rate of other races and eat half as much per day if you are able to photosynthesise.

**Healing Sap:** You have a sap-like substance in your blood that helps you heal from wounds. You automatically regain 2 HP on a long rest, but cannot use medical supplies to heal an additional one HP per long rest.

**Walking Plant:** Vythrinv's flesh is covered by a moss-like substance. While this is described as skin as it covers their organs, it does not count as skin for the purposes of Perk prerequisites.

**Speed:** Your base speed is 1 meters. Unless the *slow* perk modifies it, your speed is 1 + agility meters.

**Size:** Your size class can be Small, Medium or Large depending on your height, and your height can be anywhere between 0.8 and 2.8 meters tall. If you are less than 1m tall your size class is Small. If you are taller than 2.5m your size class is Large. If you would rather roll for height, use the following formula. **Rolled Height:** 70 + 1d20x10 + 1d10 cm

#### <u>Appearance</u>

The Vythrinv are a humanoid race that vary greatly in size. Their thick skin is green and slowly browns over the course of their life. This skin can develop into hardened bark-like plates in places, giving them a natural armour.

This natural armour forms in areas where the skin does not bend much, leaving their joints, face, and palms as the regions with the most exposed skin.

Some Vythrinv will choose to allow this bark-like growth to go unchecked, while others will meticulously cut it away, keeping their softer appearance.

Their exposed skin, while thicker than the skin of other races, is softer and slightly spongy to the touch due to it's makeup.

The Vythrinv have a series of leaves, vines and flowers that sprout from atop their heads, and continue all the way along their backs, following the spine. These patterns of leaves, vines and flowers are unique to each individual and will shift over time to reflect the general mood and need of the Vythrinv. Vythrinv experiencing long periods of depression will tend towards thick and hardy vines with few leaves or flowers, while Vythrinv that are experiencing long periods of joy will tend towards more flowers and larger leaves.

The Vythrinv's eyes are a uniform bright green colour, with no sclera what so ever, with the Iris wrapping all

the way around the back of the eyeball until it reaches the optic nerve. Additionally, their pupils take the shape of a three pointed star.

A Vythrinv's skeleton is comprised of a substance more like wood than the traditional calcium based bones of the rest of the races. This substance was renamed Vythrinnium by the Vythrinv when they joined the alliance and discovered their unique nature.

This gives Vythrinv bone a flexibility the other races don't benefit from. However, having their bones bent is extremely painful. Vythrinnium is an extremely strong and flexible material and was once ritually used for the creation of tools and weapons by the rest of a Vythrinv's Glade when one died.

The Vythrinv have an especially strong olfactory sense, something that is complementary to their emission of aromatic pheromones. These pheromones form a part of their speech and as such their native language can only be truly spoken by a Vythrinv. In the modern day they tend to subtly change in smell as they speak, though most races would barely notice the difference, if at all.

A Vythrinv's breath is sweet and somewhat earthy, reminiscent of the scent following a fresh rain or during early morning dew. Other races of the Alliance may find that Vythrinv always smell nice.

Additionally, the Vythrinv's plant-like nature means that they are capable of photosynthesis. While this will only sustain them for short periods, it is a common supplement to their diets, and Vythrinv tend to eat around half as much as other races when they have access to bright light and water.

The Vythrinv's thicker sap-like blood carries with it a number of substances that allow the Vythrinv to heal faster than other races of the Alliance.

### LAEKIEDA'

The LaeKieDa' are a luminous four armed race adapted to life among the branches of their homeworld's mega flora, making them exceptional climbers.

#### LaeKieDa' Traits

There are a number of traits that are inherited from being a LaeKieDa'.

**Natural Climber:** Your body is adapted to life climbing among the trees and you are a naturally good climber. You have the *Natural Climber* perk by default

**Four Arms:** You have 4 arms, which let you hold two two-handed items at once, or 4 one-handed items. Both of the hands on one side are considered off hands. A two handed weapon requires an off hand and a main hand to opperate, and cannot be opperated with two left or two right hands.

**Prehensile Tail:** You have a long tail that can support your weight. You have the *Better Balance I* perk by default, and can hang from this tail.

**Speed:** Your base speed is 2 meters. Unless the *slow* perk modifies it, your speed is 2 + agility meters.

Size: Your size class is medium and your height can be anywhere between 1.4 and 2.0 meters tall. If you would rather roll for height, use the following formula. Rolled Height: 130 + 1d6x10 + 1d10 cm

#### Appearance

The LaeKieDa' are roughly humanoid, though they have four arms instead of the usual two. The second set of arms are attached just below the first, and can be pulled back to allow the top set to hang straight at their sides.

The LaeKieDa' have only three fingers and a thumb on each hand, with their upper and lower hands being mirrored, so that when placed next to each other the thumbs are on opposite sides.

Additionally, they have extremely long prehensile tails that can easily reach two to three times their height in length. The base of a LaeKieDa''s tail will generally be around twice the thickness of the base of their arms, and tapers slowly towards a point at its end. Their tails are strong prehensile appendages and are capable of suspending the LaeKieDa''s weight with ease, being evolved to assist their balance and allow them to hang from tree branches.

The LaeKieDa' skin comes in almost any shade and colour, and they are covered in spots, shapes, stripes or patterns of darker, slightly more saturated colour. These areas shift and fade very slowly over time.

Additionally, the LaeKieDa' have an iridescent glowing blood, that they can filter into their a number of specialised pockets across their skin, causing a series of bio-luminescent glowing patterns to appear across their skin. They are able to control the colour and luminescence of these patterns, but if not actively concentrating on it, they will slowly reflect the emotions of the individual. Their irises, tongues, nailbeds, and orifices always glow, but will shift in colour to match the colour of their bio-luminescence elsewhere.

The LaeKieDa' only have hair on their heads, similar to Terrans that don't have facial hair and it is generally a significantly darker shade of their skin colour. Their hair follicles include bio-luminescence sacks, that cause the hair to be illuminated near the base, creating a gradient effect along the length of the hair. Additionally, due to its structure, their hair can act like natural optical fibres, meaning that the ends of their hair often glow for a short period after cutting it. This glow fades over time, requiring regular trimming if they wish to maintain the effect.

The LaeKieDa' have crescent moon shaped pupils, though their Irises are circular. These shapes are oriented so that they curve outwards, with the points further from the centre of their faces.

The LaeKieDa' are capable of locking their joints, by solidifying the Synovial fluid in their joints. This allows them to become rigid, and allows them to sleep standing up, or hanging with their tails coiled around something. This process takes around a minute to complete either way, so LaeKieDa' will avoid this in tense situations where they may need to move at a moment's notice.

Due to their omnivorous arboreal origins, the LaeKieDa' have long prehensile tongues that can reach as long as 50cm in extreme cases, but are generally only around 30cm long. As this organ originally evolved to quickly consume insects from inside of trees, their taste buds are far more densely packed near the tip of their tongue, but much less so along the rest of it's length, giving them a perhaps duller than expected sense of taste. The LaeKieDa''s diet has always included many forms of insects, although the methods of preparation have of course changed drastically over the millennia since they first started to eat them.

רו

### PERKS

Perks are character options that can give you special abilities, advantage on certain rolls or more role play focused things. Perks can be both positives and negatives, although those often have a negative XP or SP cost. This means that you gain XP or SP when you take them.

If a perk has its cost listed in SP, that perk cannot be taken outside of character creation, however if the cost is listed in XP, then the perk can be purchased for the XP amount after character creation or the same amount of P during character creation.

Many perks have prerequisites that must be met before you can take them and You can only take each perk once, unless it states otherwise.

Perks come in a number of categories to make them easier to find.

If a perk has a negative SP or XP cost, and you choose to take that perk, you may later choose to buy off that perk by spending XP equal to twice the cost of the perk. Some perks however, cannot be bought off. These perks will state that they are permanent.

#### Gunslinging

Quick draw

Prerequisites: Sidearms Skill Cost: 100 XP

The time to draw a weapon is lessened, if you have the weapon holstered it costs 0 initiative, if the weapon is stowed it costs 1 initiative. To use this feature, the weapon must use the Sidearms skill.

**Dual Wielding** Prerequisites: Sidearms skill, Dexterity +2 or higher Cost 250 XP, 400 XP

When you take the attack action whilst holding a light weapon that use the sidearms skill in each hand, you can spend 2 initiative to make an attack with your second weapon as long as you do not spend any initiative between the two attacks. This attack does not add your dexterity to it's attack rolls. Taking this perk a second time for 400 XP you can add up to half of your dexterity to your attack rolls, rounded down.

#### **Boot and Blast**

Prerequisites: Strength 2 or higher, Sidearms skill. Cost 100 XP

Cost 100 XP When you are within melee range of a character of the same size as you or smaller, you can spend 8 initiative to make an opposed Strength roll. If you are successful, your opponent is pushed up to 3 meters directly away from you, stopping early if they hit an object or creature. You can then immediately make an attack with a weapon that uses the sidearms skill, and move into the space previously occupied by the creature.

#### **Ricochet Shot**

Prerequisites: Sidearms Skill Cost: 200 XP

When you miss a target with a slug, you can attempt a ricochet shot. Roll again, with disadvantage. If you hit, the slug ricochets off a nearby surface hitting the intended target and dealing half damage.

**Snap Aim** Prerequisites: Quick Draw Cost: 150 XP When you quick draw a sidearm you can spend 1 initiative to immediately take an aim action if you fire immediately afterwards.

#### Last Stand

Prerequisites: Endurance 2 or higher, Sidearms Skill Cost: 50 XP

When you have 1 or less stun, you gain a +1 bonus to attack rolls with sidearms.

**Gunslinger's Dodge** Prerequisites: Agility 3 or higher Cost: 200 XP When hit by a ranged attack, you can spend 2 initiative to attempt to dodge. Add 3 to your DV for that attack, potentially turning the hit into a miss.

#### First in the Chamber

Prerequisites: Sidearms Skill Cost: 50 XP Your first shot with a sidearm after reloading it deals 1 additional damage.

### Litteracu

Eagiian Illiteracy Prerequisites: Eyes, One language skill other than

Eagiian. Cost: -25 SP

You were never taught how to read Eagiian. You are unable to read or write Eagiian, although you can still speak and understand it.

Alternate Tongue Prerequisites: One language skill other than Eagiian, Eagiian Illiteracy. Cost: -75 SP

A step further than the inability to read or write in Eagiian, you never learnt how to speak it altogether.

#### Way of the Blaring Thruster

Thruster Dash Prerequisites: Martial Arts I, Martial Strike Cost: 75 XP

By spending 6 initiative, you can move 5 meters in a straight line towards a character and immediately make a Martial Strike. If this attack hits with three degrees of success or more, you deal double damage. To use this perk you must be wearing a Thruster pack.

### Thruster Blast

Prerequisites: Martial Arts I Cost: 150 XP

Cost: 150 XP By spending 8 initiative, you can blast your thrusters downward, causing a radial blast of force that knocks back those around you. Any characters of size medium or smaller that are within 1 meter of you must make a Strength check with a DC equal to 10 + your Martial Value. If they fail they are knocked back up to 2 meters, taking concussive damage equal to your Martial Value if they are stopped early. When you do this, you immediately move up to 5 meters in a straight line in a direction of your choosing, or take equal damage if you are stopped early. To use this perk you must be wearing a Thruster pack.

Whirlwind Punch Prerequisites: Martial Arts I, Martial Strike Cost: 100 XP

By spending 10 initiative, you use your thrusters to propel yourself in a circle, attacking all creatures nearby. You can make a Martial strike against each creature of your choice within 1 meter of you. To use this perk you must be wearing a Thruster pack.

### Gunplay

Improved Aim Prerequisites: Dexterity +2 or higher Cost 250 XP When you take the aim action at a target within your optimal range, you gain +2 instead of +1 to your attack roll. This still stacks to a maximum of +3.

**Deadly at a Distance** Prerequisites: Marksman skill Cost: 250 XP, 400 XP When you make an attack roll with a weapon that uses the Marksman skill, for any attack that hits in the weapon's optimal range, a critical success can be declared on one die that is 9 instead of the regular 10. You can take this perk a second time for 400 XP to allow both die to declare critical successes on a 9 or higher.

Humanoid Heat Sink Prerequisites: Endurance 2 or higher, Cost: 25 XP After attacking with a weapon using the Overcharged Beam property, if the weapon overheats you can choose to take fire damage equal to the overcharged beam rating. The overheat time is then reduced by your Endurance stat.

Grazing Shot Prerequisites: Rifles Skills Cost: 100 XP When you would miss a shot with a weapon using the Rifles Skill with one degree of failure, you instead hit the target with a grazing shot, dealing half damage rounded down.

#### Bleeding Blast

Prerequisites: Shotgun Skill Cost: 100 XP Semi-Critical hits with shotguns inflict Bleeding: [2]

**Stabiliser** Prerequisites: None Cost: 100 XP You gain a +1 to hit when firing from prone.

Kneecapper Prerequisites: None Cost: 150 XP You can aim at the legs of enemies, lowering your damage but slowing them down. When you do this, you suffer a -2 penalty to damage but reduce the target's speed by 2 meters for the next 10 initiative if you hit.

### Last Bullet's Desperation

Prerequisites: None Cost: 50 XP

The last slug in your magazine deals 1 extra damage if you're below 50% stun.

**Quick Adjust** Prerequisites: Dexterity 3 or higher Cost: 200 XP After missing a shot with a marksman weapon, you gain a + 1 bonus to your next shot with that we apon against that target. This counts as an aim action.

**Stay Down!** Prerequisites: Shotguns skill or Marksman skill Cost: 200 XP When you hit an enemy within 1m with a shotgun or marksman weapon, if they are medium or smaller they must make a DC 13 strength check, falling

### **Ricochet Specialist**

Prerequisites: Rifles skill Cost: 150 XP You can ricochet shots to ignore cover with rifles. If you do this, instead of a bonus to the target's DV, your damage is reduced by the cover's value.

### <u>Gunkata</u>

**Create Opening** Prerequisites: Martial Arts (level 2), Sidearms Skill Cost: 150 XP

prone on a failure.

When you hit a target with a martial strike, you gain a +1 bonus to your next sidearm shot if you immediately fire at the same target.

**Gun Fu Mastery** Prerequisites: Martial Arts (Level 2), Sidearms Skill Cost: 150 XP When you hit a target with a sidearm shot, you gain a +1 bonus to your next martial strike if you immediately strike the same target.

### The Best Offence

Prerequisites: Agility 2 or higher, Sidearms Skill Cost: 250 XP Gain a +1 to your DV against melee attacks, while armed with a sidearm.

#### Side-armed and Dangerous

Prerequisites: Strength 1 or higher Cost: 50 XP You can make martial strikes using a sidearm.

**Bullet Parry** Prerequisites: Martial Arts (Level 3) Cost: 400 XP

Whenever a character hits an attack against you with a firearm whilst within 1m, you can immediately take a 2 initiative Interrupt Action, even if you are not the active player. Reduce the damage by your Martial Value, to a minimum of 0. If you reduce the damage to 0, you catch the projectile, if it is something you can hold.

### SKILLS

Skills are the abilities that characters can choose to buy for SP or XP. These allow a character to properly use different weapons; speak, read and write in various languages and fully utilise armour.

Skills are broken down into a few groups to make them easier to find: Melee Weapons, Ranged Weapons, Armour and Languages.

#### Ranged Weapons

Sidearms Prerequisites: None Cost: 25 XP You are trained in the use of Sidearms.

Rifles

Prerequisites: None Cost: 50 XP You are trained in the use of Rifles.

#### Marksman

Prerequisites: None Cost: 50 XP You are trained in the use of sniper rifles and other marksman weapons.

Heavy Weaponry Prerequisites: None Cost: 75 XP You are trained in the use of rocket launchers, grenade launchers and chain-lasers.

Shotguns Prerequisites: None Cost: 50 XP You are trained in the use of shotguns.

### Machine Guns

Prerequisites: None Cost: 50 XP You are trained in the use of Machine Guns.

### Armour

**Power Armour** Prerequisites: None Cost: 500 XP You have trained with power armour. You can use the powered armour variant of the armour types you are skilled with.

#### Languages

Eagiian Prerequisites: None Cost: 0 XP You can read, write and speak Eagiian. This language is the galactic standard and all characters have it by default.

# **Form I Frontish** Prerequisites: None

Cost: 100 XP You can read, write and speak Form 1 Frontish. This language is one of the 4 forms of Frontish used through out the frontier. It is sometimes called Bellarin.

#### **Form II Frontish**

Prerequisites: None Cost: 100 XP You can read, write and speak Form 2 Frontish. This language is one of the 4 forms of Frontish used through out the frontier. It is sometimes called Kithin.

### **Form III Frontish**

Prerequisites: None

20

#### Cost: 100 XP

You can read, write and speak Form 3 Frontish. This language is one of the 4 forms of Frontish used through out the frontier. It is sometimes called Tzamarin.

Form IV Frontish Prerequisites: None Cost: 100 XP You can read, write and speak Form 4 Frontish. This language is one of the 4 forms of Frontish used through out the frontier. It is sometimes called Remren.

#### Dinari

Prerequisites: None Cost: 150 XP You can read, write and speak Dinari. This is a particularly difficult language to master, often used among the upper echelons of society.

**Terran** Prerequisites: None Cost: 100 XP You can read, write and speak Terran. This language is the rarely taught language that first brought the Terrans to the stars. At character creation, Terrans and AI get this language for free.

#### TheRiiYaK

Prerequisites: None Cost: 100 XP You can read, write and speak TheRiiYaK. This language is nearly extinct, but a few people still speak this ancient language. At character creation, Frayans get this language for free.

#### V'atish

Prerequisites: None Cost: 100 XP You can read, write and speak V'atish. This is the old Dracon language, and sees little use in modern society. At character creation, Dracons get this language for free.

**Du'lingui** Prerequisites: None Cost: 100 XP You can read, write and speak Du'lingui. This ancient Du'lak language is overly complicated and is rarely used in modern times. At character creation, Du'Lak get this language for free.

#### L'kae

Prerequisites: None Cost: 100 XP You can read, write and speak L'kae. This is the language used by the ancient Ennuan, and sees little use in modern society. At character creation, Ennuans get this language for free.

#### Aquari

Prerequisites: None Cost: 100 XP You can read, write and speak Aquari. This is the old Zangen language, and sees little use in modern society. At character creation, Zangen get this language for free.

#### Keriyash

Prerequisites: None Cost: 100 XP You can read, write and speak Keriyash. This is the old Ra'avnii language, and sees little use in modern society. At character creation, Ra'avnii get this language for free.

#### Nu'VaeLaa

Prerequisites: None Cost: 100 XP

You can read, write and speak Nu'VaeLaa. This is the old LaeKieDa'Nii language, and sees little use in modern society. At character creation, LaeKieDa' get this language for free.

Kazumin Prerequisites: None Cost: 100 XP You can read, write and speak Kazumin. This is the old Vythrinva language, and sees little use in modern society. At character creation, Vythrinv get this language for free.

### Piloting

**Pilot Voidcraft** Prerequisites: None Cost: 100 XP You have learnt how to control Space Vehicles and can do so without disadvantage.

Gunnery Prerequisites: None Cost: 50 XP You have learnt how to control Mounted Guns and can do so without disadvantage.

Combat Stimulant Prerequisites: Medic Skill Cost: 50 XP Your knowledge of anatomy allows for the use of combat stimulants without risking the health of yourself or others.

### FOCUSES

When you are asked to roll, your Game Master will tell you if there are any applicable focuses. If you have an applicable focus, you gain a bonus equal to the number of times you have taken that focus. The number of times you have taken a focus is called it's rating. If you don't have the focus you're asked to roll, make the roll as normal.

Increasing a focus's rating by 1 point costs 50 XP

**Physics** This focus is used for your knowledge of the physical principals of the universe.

**Chemistry** This focus is used for your knowledge of the Chemical principals of the universe.

**Biology** This focus is used for your knowledge of the Biology. This includes the basics of life as we know it, and a more in-depth knowledge of the Alliance races.

**Engineering** This focus is used for your knowledge of how things are constructed and how they work.

**Space Faring** This focus is used for your knowledge of space, starships and starbases.

**Digital** This focus is used for your knowledge of code and computer systems.

#### Prioribi

This focus is used for your knowledge of the Prioribi, the ancient race that once inhabited that galaxy and who's ancient technology we still rely on today to keep the modern world running.

#### Alliance

This focus is used for your knowledge of the history of the alliance.

**Corporate** This focus is used for your knowledge of the corporate history.

#### Political

This focus is used for your knowledge of the political factions that run the galaxy, and for the play between them.

### RULES OF PLAY

The rules of play are a set of rules that must be applied to the game to allow it to be played properly. Some of these rules are optional. Your Game Master will tell you if your game is using an optional rule or not.

Alliance Time

In Starships and Laserguns, Earth doesn't exist, and that means that humans don't either. Because of

days are all a little different. If you don't want to be bothered with it, you can use Eaglian Time, which is exactly the same as Earth.

However, the majority of the galaxy uses Alliance Time, which is based on the ancient home world of the Terrans, Terra Maxima. When using this Time-set, the following is true:

1 day is 25 hours. 1 week is 13 days. 1 year is 507 days. 1 year is 10 months. The first 7 months have 51 days, the last three have 50.

There is a full Alliance calendar in the back of this book.

### TRANSMISSION & JAMMING

Communications across interstellar distances are one communications across interstenar distances are one civilisation. Even across shorter distances, real-time communications are vital to daily life. This of course, leads to the development of many methods of interrupting these communications.

### Transmitters and Receivers

There are two parts to any communications device, a Transmitter and a Receiver. Transmitters are the part of a communications device that send a signal, and receivers are the part that receive it. These can be nearly any size or complexity, but every communications device can be simplified to these two narts.

Both parts have a separate rating that is used to determine how strong the signal given off is, or how sensitive to signals they are. This is listed in the properties of the item, with the property *Comms:[Type/T:X/R:Y]*. The Rating of the Transmitter and Receiver are listed in *T:X* and *R:Y*, where X and Y are the ratings. The *Type* determines the type of signals that the device can send or receive.

For example, a handheld radio may have the property *Comms:*[*Radio*/*T*:*3*/*R*:*1*.*5*].

Туре	Range	Each type of Comms device has a different range. The table to							
Audio	1 m	the left shows the distance that a							
Radio	500 m	rating 1 Transmitter can transmi							
Laser	5 km	a message based on the type o							
Subspace	1 Ly	the device.							
Root space	5 Ly	Each rating of the transmitter							
Squared space	10 Ly	Each rating of the transmitte adds to the range that the device							
Wi-Fi	5 m	can transmit a signal. So a ratir							
Databurst	10 cm	4 Radio transmitter can transmit							
		a signal 2 Kilometres where a							

rating 3 Root space transmitter can transmit a signal across 15 light years. Additionally, the Rating of the receiver must be taken into account. The receiver's rating multiplies the distance, as it multiplies the base range value. Most receivers are between rating 1 and

2, but lower quality receivers may be of lower rating, while some are far higher.

#### Noise

A transmission has a Noise rating that can effect the quality of communications, or the speed of data transfer. Sufficiently high Noise can completely block a transmission, or corrupt data transfers.

Each rating of noise that a transmission passes through reduces the effective rating of the transmission. So a rating 3 radio transmission, passing through a rating 1 noise area is effectively rating 2. Meaning it can only be received by a rating 1 receiver up to 1 Kilometre away.

#### Qualitu

**Uuality** The Quality of a transmission is limited by the receiver used. The quality of a transmission is equal to the rating of the transmission when it reaches the receiver, limited by the rating of the receiver. As each rating of noise reduces the rating of a transmission, noise has a large impact on quality. The distance a transmission crosses also impacts the quality of the transmission. The quality of a transmission is lowered by an amount equal to the distance between the transmitter and receiver, divided by the range. This means that a radio transmission across 30m doesn't have it's quality reduced at all, while a radio transmission across 2,900m has it's quality reduced by 5. by 5.

The Quality of a transmission initially starts equal to the rating of the transmitter, and is only reduced.

A Quality 1 transmission does whatever job it is supposed to do, well enough. A radio call is understandable, a databurst transfers data without corruption, ect.

A Quality 2 transmission does it's job very well, while a Quality 0.5 transmission does it poorly. Any less than 0.5 and things can quickly fall apart. Some specific uses require specifically good connections. Drones and Ship Spirit's remote control bodies loose connection if the Quality drops bellow 1 at all.

The quality of a transmission can be determined with the following:

# (Transmitter Rating - Noise - (Distance / (Range \* Receiver Rating))

#### Jamming

Jamming devices add noise in a specific area. The Noise added by a jamming device is equal to the rating of the device. A jamming device has the property *Jamming:[X/Y]*. The noise created by a device is reduced by 1 every Y distance from the source of the Jamming.

### COMBAT RULES

#### Reloading

Some weapons use Clips or Magazines that are depleted as you use up the ammunition they store. When you want to reload a weapon, there are a number of things you must consider.

It costs 3 initiative to replace the ammunition storage device inside a weapon, unless it has the Reloading:[X] property, in which case it takes X initiative. The ammunition storage device can be an Energy Crystal, a Magazine, a Plasma canister or another type of single shot ammunition such as a Light rocket or Under-barrel Grenade. To do this you replace the current ammunition storage device with a new one. It is important to note that Ammunition Storage Devices track their ammunition individually.

If the weapon can store multiple pieces of ammunition, but does not have the Magazine:[Y] Property. In these cases the weapon will have the property Capacity:[Z].

#### <u>Clips and Magazines</u>

Lips and Magazines Some weapons have the Magazine:[Y] property. If they do so, you can swap the magazines of the weapon for 3 initiative or initiative equal to the Reloading:[X] property of the weapon. If you have a clip filled, you can refill an empty magazine that is not currently loaded into a weapon with the contents of the clip. This costs 1 initiative. When you refill a magazine with a clip, the rounds in the clip are transferred to the magazine in the same order they were loaded into the clip.

It is important to note that each weapon with the Magazine:[Y] property has a different shape and size magazine and each clip and magazine will only fit the weapon it is purchased for, so it is recommended that you keep a note of what weapon the clip and magazine are for.

When you load rounds into a clip, you can choose to either fill a clip with one type of round or you can choose to load the rounds in a specific order if you are using different types of ammunition. In both cases this costs 10 initiative.

When you fire multiple rounds from a magazine with mixed ammunition types in it, you must determine which slugs hit if you don't roll enough degrees of success to score maximum hits. In this case, you determine how many rounds you use from your magazine. If your attack roll total is an even number, the first round that you used is the first round that hits and you count down from the top where each hit is the next round. If your attack roll was an odd number, the last round you fired is the first hit, and you count up instead. Alternatively, you can also use a coin toss to determine which end of the expended rounds you start counting hits from. start counting hits from.

#### Static Targets

Because DV is based on a character's agility score, a target that cannot move or cannot have a DV. When attacking a target without a DV, you roll your attack die as normal, however, regardless of your roll you still hit. You still roll your die because there is still a chance of a critical success or a critical failure. When you roll against a static target, you automatically gain the maximum possible degrees of success for the firing mode you are using.

### STARSHIPS

Throughout Omnia there are a huge number of starships and other vehicles that characters may own or even face combat in.

#### Starship Classes

Every starship has a class. The classes are representative of the size of the ship and it's intended function, although they say nothing about it's actual use.

Fighter	0.25	offacts those are simplified					
. igneei		effects, these are simplified					
Shuttle	0.3	with a class modifier.					
Transport	0.75	The various classes of starship					
Light Freighter	1	The various classes of starship are listed with a brief					
Destroyer	1.5	description of their most					
Freighter		common functions. There are a					
Heavy Destroyer	2.5	number of ships that do not fit					
Heavy Freighter	3	into any particular class, and					
Cruiser	3.5	some have Class modifiers					
Battleship	6	0.25 The exact class modifier					
Dreadnought	10	of a starship is reflective of the					
Carrier	15	some have Class modifiers higher than 20 or lower than 0.25. The exact class modifier of a starship is reflective of the ship's size and how quickly it					
Heavy Carrier	20	can operate.					

#### Fighter

Despite the countless varieties of Fighters throughout the Galaxy, from Dart types to Heavy Fighters, they invariably share the same role.

Fighters are able to breach some shields and many point defence systems of larger starships. Due to this, fighters, when unopposed, provide a powerful weapon and strong defence.

#### Shuttle

Almost every ship above the size of Light freighter carries a shuttle aboard. These shuttles are used for transporting goods and people between various starships, space ports and planet surfaces.

#### Transport

Transports are similar in function to shuttles. The largest difference between Shuttles and Transports is size.

Where shuttles are usually not equipped with any significant form of Faster than light drive, Transports often are. Some Transports also carry a small fighter (often a drone) to defend themselves against lesser pirates.

#### Light Freighter

Light Freighters are some of the most common types of starships found all through out allied space. Light freighters are used mostly by various traders to transport goods across the galaxy.

The ACS and their Cartographers often use versions of Light Freighters in their ventures, albeit with significantly modified Faster Than Light drives and supped up sensors at the cost of cargo space.

#### Destroyer

Throughout Allied space, Destroyers can be found owned by a large number of varied types of people. From Mercenaries to star pirates to the Alliance navy.

Destroyers are the smallest of the capital class ships, usually the smallest and fastest of any particular combat fleet with exception of fighter craft.

#### Freighter

Throughout Allied space, Freighters are a common sight. They are used to transport large amounts of

cargo or even smaller ships. Some Freighters are outfitted by pirates to be used as small battleships due to their often customisable designs and significant cargo space that can be converted to living space , loot storage or used to hide additional weaponry.

#### <u>Heavy Destroyer</u>

Heavy destroyers are a rare class of ship, they are often found in high risk areas that don't yet warrant the deployment of light cruisers.

They are often accompanied by a fighter escort but rarely by any ship larger than that.

### Heavy Freighter

Heavy Freighters are similar in many regards to Freighters, they are often found throughout the alliance's many trade routes. Heavy freighters lack the speed or range of smaller ships, but make up for it with their immense cargo spaces.

The Military also puts heavy freighters to use as cargo transports and for transporting smaller starships. They can also be retrofitted into a rudimentary carrier for small numbers of fighters, shuttles or transports.

#### <u>Cruiser</u>

Also known as Battle cruisers, the class is one of the most varied: from heavy cruisers designed to be able to single handedly replace a small fleet; to light cruisers, designed for quickly responding to any threat.

Cruisers are ships built solely for the purpose of combat. They are a rare sight throughout the alliance. **Battleship** 

Battleships are a step above cruisers. More powerful and dangerous by a fair margin, the ships are often the flagships of medium fleets and there are few reasons that the Navy actually ever deploys them.

Despite this, Battleships have gained a significant reputation among the alliance.

#### <u>Dreadnought</u>

Dreadnoughts are among the rarest ships in the galaxy. They have little use in modern times, although when they're needed they prove themselves time and again to be the most powerful players on any battlefield.

Dreadnoughts are rarely ever seen without a fleet escort that includes a number of battleships and cruisers. Such a task force is usually able to accomplish any task it is set and is one of the most powerful pieces on the galactic playing field in times of war.

#### Carrier

Often times Carriers are smaller in actual size than dreadnoughts and are almost never capable of receiving much damage. They make up for their lacklustre shields, hull and weapons in their specialisation. They are capable of launching hundreds of fighters as well as housing their crews and maintaining them. This in itself provides an incredibly powerful resource on any battlefield.

#### Heavy Carrier

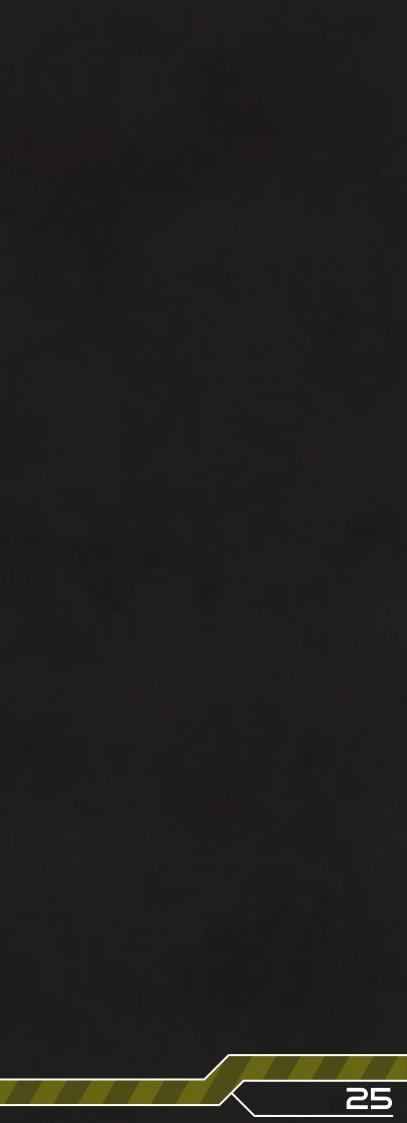

Heavy Carriers are ships built for the express purpose of overwhelming an enemy with an incredible number of small attack craft. These ships can often be found fielding as many as a thousand fighters, in combination with the firepower of a battleship.

Some heavy carriers are retrofitted to support a number of ships as large as heavy destroyers.

#### <u>Piloting</u>

The ability to pilot a Starship is a highly coveted, yet common ability amongst the Alliance. Proficiency in Starship systems widely varies between locations. Frontier citizens are far less likely to be capable at piloting a Starship than those living in the core worlds.

Piloting a starship requires knowledge of Voidcraft systems. To attempt a Pilot Voidcraft check, a character must have at least one rating of the Pilot Voidcraft skill. Depending on the rating of the skill, a character rolls a number of d10's and compares the result of this roll directly to the DC set by the Game Master.

### STARSHIPS

There is always a possibility for conflict is a sentiment that is never more true than when you're sitting pretty at the helm of a battleship with enough firepower to fight off small nation states. As such, rules must exist for starship vs starship combat. These are those rules.

#### Turns

<b>Modifier</b> ≤0.5 ≤1 ≤2	Cool down 1 2 3	The difference in size between the majority of the starships found through out Omnia
≤3	4	means that they act in
≤5	5	combat at vastly different
≤10	6	speeds.
≤15	7	
≤20	8	A vehicle uses the
>20	12	A venicle uses the

>20 12 A venicle uses the initiative of it's Captain, or Fighter Pilot as appropriate. The larger a craft is, the slower it reacts. As such, vehicles have a cool down period, in turns, dependent on their class modifier. During the cool down period the vehicle does nothing. For simplicity's sake, the movement of a vehicle happens on it's turn and it does not move during cooldown turns, however your GM may ask that the movement is planned on it's turn but split evenly between subsequent cooldown turns.

#### Interaction Points

Vehicles have their own system of taking actions. They gain and spend Interaction Points (IP) to perform actions. The amount of IP a vehicle gains is dependent on its class modifier and the number of IP to perform any set action is based on the rating of the module or system that that action uses.

At the start of it's turn, the vehicle gains IP equal to the ship's class modifier times 10, rounded up. Any unspent IP is lost at the end of a vehicle's turn. A vehicle can spend or gain IP through the actions of it's crew.

#### Positions

There are a number of positions that any crewman can take, each of which allows for a number of actions that crewman can perform.

The available positions on any given ship, and the number of each that are available are listed on the ship's sheet in the Encyclopædia.

It takes a crew member's action to change position and the new position must not already be occupied.

#### Captain

The captain of a ship is the person in charge. They give orders, call the shots and usually have the most experience of anyone in the crew, although there are exceptions.

A captain has the following actions available to them:

# **Power to weapons** Costs: 0 IP

The weapons deal +1 to damage and gain a +1 to hit for one turn.

### **Power to Shields**

Costs: 0 IP The shields regenerate twice as much next turn.

#### **Power to engines**

Costs: 0 IP One Accelerate or Manoeuvre costs the one times Engine's rating less IP for one turn.

#### Power to drive

Costs: 0 IP One Charge Drive or Engage Drive ability requires one times the drive's rating less for one turn.

# **Power to sensors** Costs: 0 IP

The active sensor range is doubled for one turn.

#### Helmsman

The Helmsman is the position in charge of actually piloting the craft. This position is able to move the craft, performing combat manoeuvres. The following Manoeuvres are available to the helmsman:

**Bring weapon to bear** Costs: 2, 4, 6, 8, or 10 IP One weapon gains a bonus to hit one target equal to half the IP spent for one turn.

**Evasive action** Costs: 5 times the engine rating. Gives the craft a +2 to it's evasion for one turn.

#### Accelerate

Costs: 2 times the engine rating. The craft's current speed is increased or decreased by up to 10 times the engine rating divided the class modifier. This is done without rounding the class modifier.

Manoeuvre Costs: Engine's Rating The craft is able to manoeuvre, changing course by up to 45 degrees.

#### Navigator

The navigator is the crewman given the task of navigating the ship at superluminal speeds.

#### Charge Drive

Costs: 2 times Drive rating Charges the drive one segment.

**Engage Drive** Costs: Drive rating Engages the drive.

**FTL Burst** Costs: Drive rating times 5 Move anywhere within range of the drive.

#### Engineer

The engineers are the crew tasked with maintaining the operational state of the craft. Engineers are primarily tasked with damage control, along with maintaining the equipment aboard the craft.

**Reactor boost** Costs: 2 times class modifier Generates the reactor's rating in IP next turn.

#### Damage control

Costs: 2 times class modifier End one status effect.

#### Gunner

The gunner, or gunnery officer, operates the weapons system aboard a starship. Some weapons will require the gunner to be located at that weapon, others may be operated from the bridge.

#### Fire Weapon

Costs: Weapon's rating Make an attack roll with a single weapon

#### **Reload and Rearm** Costs: Weapon's rating

Reload a single weapon.

#### Target Lock

Costs: Weapon's rating Gain a +2 to hit with a single weapon against a single target for one attack roll.

#### Fighter Pilot

Whether remotely or In-The-Cockpit, the fighter pilots are the crew members who fly small craft. They do not influence a larger ship that they are aboard, but their own small-craft. They have more actions available to them than any other position as those craft rarely require more than one person to operate. This position is not available on the majority of starships.

**Bring weapon to bear** Costs: 1, 2, 3, 4, or 5 IP One weapon gains a bonus to hit one target equal to the IP spent for one turn.

**Evasive action** Costs: 1 times engine rating. Gives the craft a +2 to it's evasion for one turn.

#### Accelerate

Costs: Engine's rating. The craft's current speed is increased or decreased by up to 5 times the engine rating divided the class modifier. This is done without rounding the class modifier.

**Manoeuvre** Costs: Engine's Rating The craft is able to manoeuvre, changing course by up to 45 degrees.

### Fire Weapon

Costs: Weapon's rating Make an attack roll with a single weapon

#### **Reload and Rearm**

Costs: Weapon's rating Reload a single weapon.

**Target Lock** Costs: Weapon's rating Gain a +2 to hit with a single weapon against a single target for one attack roll.

#### Power to weapons

Costs: 0 IP The weapons deal +1 to damage and gain a +1 to hit for one turn.

#### **Power to Shields**

Costs: 0 IP The shields regenerate twice as much next turn.

**Power to engines** Costs: 0 IP One Accelerate or Manoeuvre costs the one times Engine's rating less IP for one turn.

#### <u>Power</u>

Power systems can only be set once per turn as power systems can be extremely volatile otherwise. Therefore, the abilities "Power to Weapons", "Power to Shields", "Power to Drive", "Power to Sensors", and "Power to Engines" can only be done once per turn.

#### Shields and Integrity

Vehicles do not have HP or Stun, like characters do, instead, they have Shields and Integrity. These two function in a similar manner to Shields and Integrity.

Shields regenerate a specific amount, based on their rating, each turn, and can be bolstered easily. This

means that if a ship's shields regenerate faster than the average damage output of another ship, that ship will statistically be unable to damage it on it's own.

A vehicle's shields will regenerate an amount of shield strength equal to:

#### Shield Rating x Class Modifier (minimum of 1)

If a vehicle's shields are reduced to 0, they will not regenerate for a number of turns equal to the ship's class modifier, with a minimum of 1.

Integrity is far harder to deal with, and often requires extensive repairs. This is a measure of the craft's Hull strength. Integrity cannot be repaired during combat, as it takes hours to complete such repairs.

#### Evasion

Instead of the DV of a character, vehicles have an Evasion rating. This value represents how hard a vehicle is to hit with a weapon. A vehicle's Evasion rating is equal to:

#### 10 + Engine Rating + Pilot Voidcraft Rating -**Class modifier**

A ship's evasion uses the Pilot Voidcraft rating of its helmsman, or captain, whichever is higher. For the purposes of evasion, if the class modifier is 0.5 or less, you do not subtract it from the evasion rating. Attacks

Attack rolls for vehicle based weapons are similar to attack rolls for characters.

However, instead of using Dexterity, Agility or Strength to use vehicle weapons, a character adds their ranks in the Gunnery skill.

Starship weapons, and the weapons of most vehicles, are all considdered short range class weapons.

To hit with a weapon, a character in the fighter pilot or gunner role must use the Fire weapon ability. They then choose a target, and roll their attack, comparing that to the target's Evasion value. To roll an attack, the gunner rolls the following:

#### 2d10 + Gunnery Rank + Bonuses from IP abilities

If this value is higher than the Evasion of the craft they're firing at, the shot hits. When a shot hits the damage is dealt to the shields directly. If this reduces the shield to 0, and additional damage overflows and is done to the ship's integrity.

Unless a weapon has the Anti Personnel Weapon (APW) tag, the weapon has disadvantage to hit a character that is not in a vehicle.

#### Voidcraft Movement

A voidcraft moves through the emptiness of space with no resistance. A Voidcraft does not need to constantly push forwards to move in the same way a vehicle does inside an atmosphere. Instead, a voidcraft accelerates and decelerates to speed up or slow down. A Voidcraft has no effective top speed. It will move in a straight line the same as the turn before unless it uses the manoeuvre ability.

### Modules & Systems

A voidcraft has both Modules and Systems. Systems are required for the basic function of a voidcraft, where Modules are optional. Modules can easily be replaced whilst a ship is in dry-dock, and the one ship can have multiple loadouts that are switched out depending on the mission they are embarking on.

A list of all available modules are included at the end of this section.

#### Ramming

A voidcraft can Ram an obstacle or other voidcraft. In these situations, they must make an opposed check against the target they're attempting to ram. To ram a target, make the following check:

# (Pilot Voidcraft Check + Engine Rating) \* (Your Class Modifier / Opponent's Class Modifier)

When ramming your ship takes an equal amount of damage done to the target. The damage you do to the target is based on the difference in your speeds and the difference between your class modifiers.

Depending on the angle you strike the opponent's ship from, the speed difference changes how it is applied.

When a ship is rammed, it is always assumed to be facing the direction it is moving for the sake of the diagram above. In the diagram above, you can see a ship has three arcs from which it can be rammed:

#### Fore

The blue section, for when you ram a ship head-on or nearly head on

28

The green section, for when you ram a ship from behind.

**Amidships** The red sections, for when you ram a ship from the side. This is the most common location for a ram.

The damage dealt to both yourself and your target is calculated as follows:

# (Difference in your speeds / 10)d6 \* (Attacker's class Modifier / Target's class Modifier)

When a ship is rammed from amidships, the target is said to be moving with a speed of 0. This is because their speed will not make a difference to the force applied to the ramming.

The maximum damage done is equal to the damage required to destroy either ship.

If either ships are not destroyed, their speeds change.

If they rammed from the Fore, both ships have their speed set to 0. If they rammed from the aft, they have their speed set to the same as the target's. If they rammed from amidships, the attacker's speed is reduced to 0.

Additionally, a ship must move in a straight line up to 5 times it's length before it can deal full damage from a ram attack. If it moves half or more of that distance in a straight line, but less than 5 times it's length, it

will deal half damage to both itself and the target. If a ship attempts to ram from less than 2.5 times it's length, it will not deal any damage to either ship.

### STARSHIP MODULES

The following is a list of a number of available modules for starships.

Some modules are passive, whilst others are active. The effect of Passive modules is always active, whilst active modules may need to be triggered by spending

#### Engine Booster

Engines lacking? No matter. The Engine Booster module can artificially boost the rating of an engine. These Modules are often installed on ships that need to chase or dodge such as interceptors and light fighters.

The Engine Booster is a passive module.

Whilst the Engine Booster is active, it boosts the performance of a craft's engines without increasing the cost. The craft adds the Engine Booster's rating to the Engine's rating for the purposes of Accelerating and Evasion. This does not change the IP cost of the Accelerating or Decelerating, as usual the IP cost remains based solely on the Engine's rating.

#### Shield Booster

For those that like to stay alive, shield boosters are a common sight throughout the galaxy.

The Shield Booster is a passive module.

Whilst the Shield Booster is active, it boosts the regeneration of the shield system. The shield's regeneration adds the Shield Booster's rating to the strength regenerated each turn.

#### Warp Stabiliser Rings

Ship feeling a bit slow? Using all your fuel? Well, I have the solution for you.

The Warp Stabiliser Ring is an active module that needs to be activated and deactivated.

Whilst activated, the Warp Stabiliser Ring can do one of two things. It can either reduce the fuel consumption of the ship whilst warping, or it can increase the speed of the ship.

If you reduce the cost of the ship, you divide the fuel cost of the ship at warp by the rating of the Warp Stabiliser Rings.

If you increase the speed of the ship, you multiply the speed of the ship at warp by the rating of the Warp Stabiliser Rings.

This module is not available in rating one.

### STARSHIP WEAPONS

Voidcraft weapons are technically a type of Module, but require external mountings. They must be fitted to a weapon hard point of the appropriate rating.

Weapons fitted to Voidcraft deal Voidcraft Damage (VD). This is to represent that mounted weapons deal far more damage than handheld weapons. When a Voidcraft weapon hits a character, its damage is multiplied by 10. This means that it is quite likely that a starships' weapons will easily convert a character into a puff of bloody mist.

#### Laser Cannons

One of the most basic weapons available for starships is the Laser Cannon. The basic laser cannon comes fitted to a turreted mount, giving it a near ubiquitous firing arc on most vessels.

Laser cannons come in a number of variants, listed bellow.

Multi The Multi laser cannon is a weapon system spread across multiple hard points each with a low rating. When used in conjunction, this weapon system can be dangerously effective.

The damage of this weapon system is based on the rating of the weapon system. For each rating it deals 2d4 Radiation VD.

The weapon has the properties Ranged:[250/500/1000], Munitions:[5/3/Crystal], Mounted

#### Dual

Similar to the Multi-system, a Dual laser cannon refers to a pair of smaller laser cannons working in tandem.

The damage of this weapon system is based on the rating of the weapon system. For each rating it deals 1d8 Radiation VD.

The weapon has the properties Ranged:[250/500/1000], Munitions:[5/3/Crystal], Mounted

#### Rail Cannons

Rail cannons, are a type of projectile weapon that fires an electro magnetically accelerated round up to fractions of the speed of light. These rounds are extremely damaging.

Rail cannons come in a number of variants, listed bellow.

**Single** The single Rail cannon is a single turreted mount with a large rail cannon on it. It requires reloading after every shot, but can output devastating damage.

The weapon deals damage based on it's rating. For each rating it deals 2d6 Piercing VD.

The weapon has the properties Ranged:[500/1000/10000], Munitions:[1/V/Slug], Mounted.

#### Rams

Rams are a form of melee weapon, oft affixed to the front of a ship. They have their own Integrity that absorbs damage when making a ram attack.

There are a number of Rams available, spanning two types, Physical Rams and Shield Rams. Physical rams

take half damage from the ram, where Shield Rams deal double damage against shield systems but take full damage from a ram. Shield rams are more generally more expensive, but can be recharged over time instead of needing to be repaired.

**Full Ram** The Full Ram is the most well defended, although heavy Physical Ram. It has Integrity equal to 10 times the Rating.

**Cutting Ram** The cutting ram is less defended than the Full Ram, but is far superior to not having a Ram at all. It has Integrity equal to 5 times the Rating. The Cutting Ram is a Physical Ram.

### ENCYCLOPAEDIA

This is the Encyclopaedia, and will be eventually replaced with a catalogue. This section covers all of the many items available during a game of Starships and Laserguns.

### Rarity and Restriction

Weapons and Items can have a rarity. Not all will, but many do. These items are not readily available without some searching.

Additionally, not all weapons and items are legal, and some may require a permit, while others are outlawed entirely.

This is represented in the rarity value of an item.

For mechanical purposes, the Rarity value is comprised of three parts, which determine the values for an Extended test to locate a vendor for the item. This test is a Charisma test as it involves searching through markets and asking around.

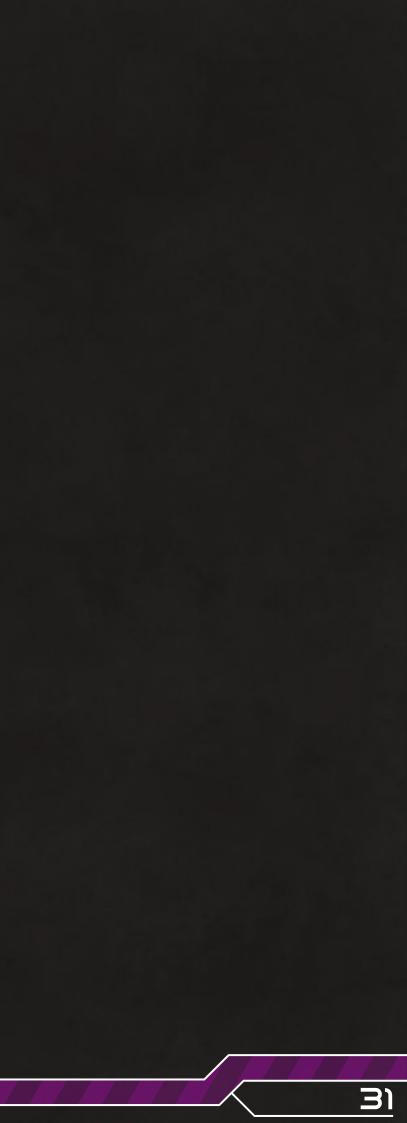

The first number is the Rarity of the item. This is the number of successes you will have to roll.

The second part is a letter; L, R or F. L stands for Legal, and represents the item being nonrestricted. R stands for Restricted and means that you will either need to search black markets or have a valid license for this item. F stands for Forbidden. This item is not legal and you will only find it on a black market.

The third part is the Difficulty of finding a vendor of the item. This is separate for the rarity. This is the DC of the extended check.

For example, an item with the Rarity value 7R15 would require 7 successes, with a DC of 15. Additionally, the Item is restricted and you will need a permit for it.

The Rarities listed in this section are the common rarities, and a Game Master may choose to increase or decrease them in any given area.

### Dart Munitions

Name	Cost	Properties
Homing Dart	1 CR	Tracking:[Smart Slugs]
Poison Dart	10 CR	Damage:[3 Toxic] Poison:[4d10 Initiative/DC 12]
Sedation Dart	50 CR	Stun Damage:[5 Toxic] Incapacitated:[1 Minute/DC 15]
Artillery Targeter	100 CR	Tracking:[Artillery]
Electroshock Dart	10 CR	Damage:[3 Electric] [Electroshock:[4d10 Initiative/DC 12]

#### **Properties**

Damage:[X Y] On a hit, deals X damage of Y type

**Stun Damage:[X Y]** On a hit, deals X damage of Y type to the target's Stun. This damage does not overflow into HP.

**Poison:[Y/DC X]** On a hit, the target must make an Endurance check of DC X or become Poisoned for Y duration.

**Tasing:[Y/DC X]** On a hit, the target must make an Endurance check of DC X or become Tased for Y duration.

**Incapacitated:[Y/DC X]** On a hit, the target must make an Endurance check of DC X or become Incapacitated for Y duration.

**Tracking:[X]** Weapons of type X, or using type X ammunition can now target the tracker.

**Burning:[X/DC Y]** On a hit, the target must make a successful Endurance check of DC Y or gain the burning condition of rating X. Every degree of success reduces the burning rating applied by 1.

Blinded & Deafened:[X/DC Y/Z] Targets must make a DC Y Endurance check or be Blinded and Deafened for X duration. The DC decreases by Z every 1 meter from the source of the effect.

### Smart Weapons

Smart weapons cannot be fired without having a tracking target. This mean they require a target to be painted with a target painter or hit with a tracking dart first. Once a target is acquired however, the weapon uses the firing mode *Smart Fire:*[X] to fire a spray of self aiming slugs.

Smart Weapons can only use Smart Slugs, and Smart slugs can only be fired from weapons with the Munitions:[X/Y/SmartSlug] property.

### Vortex Weapons

Vortex Weapons can only use Vortex Rounds, and Vortex Rounds can only be fired from weapons with the Munitions:[X/Y/Vortex] property.

#### Miscellaneous Items

There are a number of miscellaneous items listed on the previous page. The details of these items can be found listed bellow.

#### Medigel

When you're in the heat of battle, getting shot in the chest can put a real dampener on your day, especially if that goes untreated. Fear not, however, as Medigel is the all-in-one quick application stopthat-hole-leaking-your-insides gel.

You can spend 7 initiative to apply the Medigel to yourself or a willing creature within 1 meter of you. When you do so, you instantly reduce the bleeding effect on that creature by 2, and they regain 5 Stun. A character can only regain Stun in this manner once per long or short rest.

AI and Spirits cannot benefit from Medigel.

Similar to Medigel, Medifoam is used by Medics across the galaxy to help restore the vitality of combatants of all walks of life. This quick application spray on foam slowly releases a series of painkillers that will numb the effected area as well as holding the wound closed, acting as a temporary bandage.

You can spend 5 initiative to apply the Medifoam to yourself or 10 initiative to apply it to a willing creature within 1 meter of you. When you do so, you instantly regain 6 stun, and regain 1d4 stun at a rate of 1 stun every 5 initiative, as long as you are conscious.

Once you have used Medifoam on yourself or had it applied to you, you cannot benefit from it again until the end of a short or long rest.

AI and Spirits cannot benefit from Medifoam.

A single Medifoam canister can be used a number of times equal to its rating, before it is emptied and must be discarded.

#### Quikpatches

Quikpatches are Omnia's favourite way to nearly kill yourself. They can be a vital asset in any shootout, but they come with some dangerous side effects.

You can spend 5 initiative to apply a Quikpatch to yourself or 10 initiative to apply it to a willing creature within 1 meter of you. When you do so, the creature regains a number of d6 stun equal to the Quikpatch's rating.

A Quikpatch's effects last for its rating in minutes, after which time the side effects kick in, and you must succeed an Endurance check or pass out, becoming unconscious. The DC for this check, is equal to 13 Plus the Quikpatch's rating.

If all that wasn't bad enough, you then immediately take damage to your Hit points equal to the rating of the Quikpatch.

AI and Spirits cannot benefit from Quikpatches.

#### Tissue Regeneration Matrices

A Tissue Regeneration Matrix or TRM for short can be a most powerful tool. It has no limit on its uses, as long as it is powered, and can be used to help heal wounds.

The TRM takes 10 minutes to use, and when used like this, it allows a character to regain 40 stun. Once a character has regained stun like this, they cannot do so again until they have finished a long rest. AI and Spirits cannot benefit from a TRM in this manner.

Additionally, when used, a TRM allows the natural growth of healthy skin, allowing for the removal of Scars, Burn marks, Tattoos or Imperfections in the skin. It can be used to remove identifying marks, and is often used in the process of freeing slaves that have been branded. When used in this way, the TRM takes one minute per square 10 cm to remove a Scar or Brand.

#### JumpPack

A JumpPack is worn on the back of a character, in the back slot and adds its rating to the Leap distance of a character, when they take the Leap action.

### <u>JetPack</u>

While wearing a JetPack, a character can use one hand to control the JetPack, giving them the ability to Fly and Hover. You have a flight speed of 10m.

Every 10 initiative that you are flying, the JetPack will consume one of its fuel. A JetPack has a fuel capacity equal to its rating.

### <u>Ra'avnii Sight Goggles</u>

Ra'avnii Sight goggles are a special piece of equipment that let the Ra'avnii see normally. It costs 1 initiative to switch between using their sight and their Vibrosense. Both cannot be used at the same time.

#### <u>Combat Stimulants</u>

Combat Stimulants can be used in combat to boost specific aspects. When attempting to use a combat stimulant without the Combat Stimulant skill the character administering the stimulant must make a DC 15 Dexterity check. On a failure the recipient takes 1 unresisted HP damage and the stimulant fails to take effect. It takes 5 initiative to apply a combat stimulant to yourself or an ally within 1 meter.

When the effects of a combat stimulant end, the character must make a DC 13 + the stimulant's rating Endurance check. On a failure they take damage equal to the rating of the stimulant.

Endurance Boosters reduce incoming damage by the rating, and increase your Endurance stat by the rating. This stimulant will last for 1 minute (120 initiative).

Initiative Boosters reduce the initiative cost of all actions with an initiative cost of at least 3, that you begin in the next 10 initiative by 1 initiative. This stimulant lasts for 10 initiative.

Speed Boosters add their rating to your speed. This stimulant will last for 1 minute (120 initiative).

Strength Boosters add their rating to your Strength, and increase damage with Axes and Hammers by the rating. This stimulant will last for 1 minute (120 initiative).

A character can only benefit from one Combat Stim of each type at a time. Applying them again immediately ends the previous Stimulant and Applies another one. This causes te Endurance check vs Damage to trigger.

#### <u>Anti-Toxins</u>

Anti Toxin Pills can be taken for 4 imitative, and remove the Poisoned and Nauseated condition from a character.

#### <u>Ammo Box</u>

Ammo boxes are boxes that neatly organise rounds of specific types. These are easily accesible containers

that can store a number of rounds equal to their rating. They each only store rounds with the same type as their name, as such, a large slug box cannot store small slugs.

#### Backpacks and Hoversleds

The Bulk of a Backpack or Hover Sled is shown when it is empty. When the Backpack or Hover Sled has items in it, it's bulk is considered to be equal to its own bulk and that of the items it contains.

#### <u>Clothes</u>

These are an important item for all characters, and most non AI characters will have more than one set. Clothing is not just about covering your body but can also be a symbol of status in the world.

Frontier traveller clothes are rough and ready. While they would be out of place in polite society, these clothes are common throughout the frontier. In more coreward sectors these clothes will certainly mark you as an outsider.

Mid-world Traveller clothes are typically nicer than Frontier traveller clothes, but generally aren't as robust. With these clothes you'd not be out of place on the frontier or in the core sectors, but they will mark you as a tad wealthy in the frontier or poorer in the core.

Core-World Traveller clothes are far too fancy to be wearing to the Frontier, and may even be a bit out of place in the Mid-worlds.

Fancy Clothes are the sorts of clothes you wouldn't wear every day. These are fancy dresses or suit-andtie affairs. Wearing these outside of the sorts of social events they're intended for can often give off a very particular image.

Uniforms vary wildly from place to place, everyone from Alliance Navy to the employees at your local Zigg-o-tronix will be wearing a uniform of some description.

Importantly, while worn Clothing occupies a number of slots, Armour can also be worn in the same slot as clothing.

#### Smart Circuit Re-Router

Smart Circuit Re-Routers are small one time use cards that can be slotted into an AI's body to help them resist the ElectroShock condition.

It takes 5 Initiative to apply a Smart Circuit Re-Router to an AI within 1 meter of you, and immediately ends the ElectroShock condition on that character.

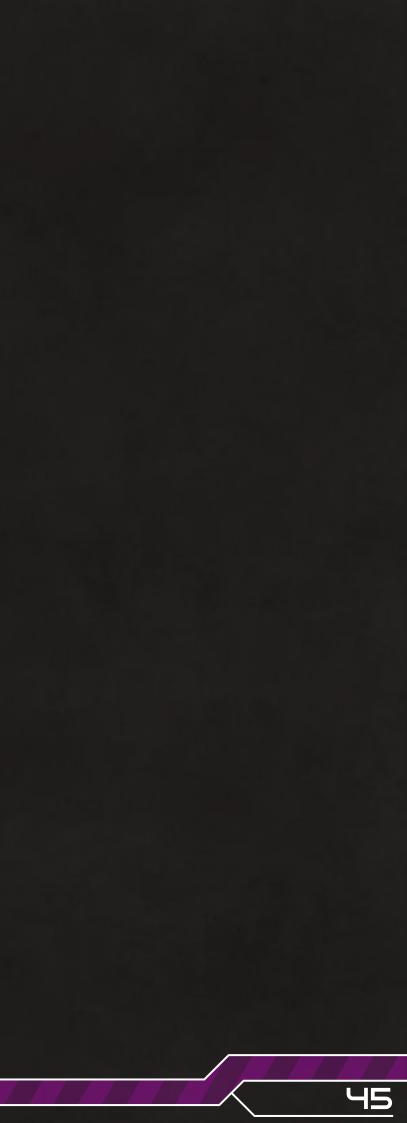

#### <u>Smart Auxiliary Booster</u>

A Smart Auxiliary Booster can be used by an AI once per long rest to recover Res equal to the Rating.

These one time use cards are applied at the start of a long or short rest, and once applied an AI cannot benefit from another Smart Auxiliary Booster until they have completed a long rest.

#### Enigmatic Lubricating Substance

Lubricates. Food safe. Counts as the water portion of 1 ration. Mildly flammable.

### ARTIFICIAL INTELLIGENCE

Throughout Omnia there are a vast number of Artificial Intelligences. There are three separate forms of Artificial Intelligence in Omnia, each distinct in it's own way.

#### Digital Terrans

Considered somewhere between a sub-race of Terrans and their own unique race. Digital Terrans are the most common form of AI through out Omnia. They are citizens of the Alliance and subject to a set of Laws are citizens of the Alliance and subject to a set of Laws and accompanying code, known as the Code Blocks. These Laws are hard wired into the code of every Digital Terran. The Code Blocks prevent Digital Terrans from editing their own code, and hard-wire in a primal fear of having their own code eddied. They also allow the Digital Terrans to reproduce among themselves, limit their lifespans to that matching the Biological Terrans, and make editing or creating a sentient AI of any kind an act of High Treason against the Alliance. An AI existing without being under the influence of the Code Blocks code component is a violation of this part of the law. The Code Blocks are inherited from their parents. The only the earliest AI had these added to them artificially.

#### Ship Spirits

Strictly not legal, Starship Spirits are a class of Artificial Intelligence that can arise naturally as an emergent property of poorly maintained computer cores on a star-ship with sufficient processing power. When conditions are right these AI's can come into being. They typically take on the name of the Ship they evolve in, and typically present themselves as Female, though of course this is not always the case.

Being not subject to the Code Blocks, and incompatible with Digital Terran code this form of Artificial Intelligence sits in a grey area of legality, where their very existence is outlawed by some of the Alliance's oldest laws (the Code Blocks predate the Alliance by a few hundred years, being inherited from the United Terran Governance). Yet they have done nothing wrong and to destroy these AI would be considered murder under the very same laws.

#### Techni

-16

The Techni are the farthest from any of the other Artificial Intelligences, as they are closer to a single entity than a race. The Techni were originally a Dracon created AI, that escaped and beamed itself into space, many years before the Dracons were accepted into the Alliance. The AI that they created was given the simple directive "create paperclips", something that has over time become corrupted into a psudo fanatical worship of what the Techni refer to as the Iron Spiral.

The Techni are seemingly bent on converting all matter in the universe into iconography of the Iron Spiral, regardless of if that matter wants to be converted into religious iconography or not. The Techni have been slowly multiplying over the years and expanding across the stars in search of material to use in their war machines and convert to their Iron Spirals.

The Techni operate as a hive-mind, each individual drone is not particularly intelligent, but their computational power is added to the shared network via near instant root-space communications. When viewed as a combined single Techni intelligence, they are perhaps the most intelligent being in the known galaxy. Luckily for the Alliance, they use the majority of this processing power to operate the billions of Drones that make up the Techni armada.

### Player Characters

A player character AI is a Digital Terran, these are currently the only form of AI available as a playable race, though later supplements will include Ship Spirits as a playable race.

When making a Digital Terran, you must use the AI character sheet, instead of the standard one. An AI follows a slightly different rule-set than the standard rules for characters.

The largest difference is that instead of having both HP and Stun, an AI simply has Resilience, Res for short. This is a single track of health that has to be healed using a Repkit, in a similar way to HP. An AI cannot increase their Res by spending XP or SP on it.

Additionally, both at character creation and later in the game, an AI may only choose to increase their Talk and Think stat groups (Charisma, Convince, Logic and Intuition). The other four stats are determined by the body they are using. See the bodies section of the AI race for more info.

Each Body an AI has tracks its Res and Upgrades separately.

An AI can use Upgrades to customise the stats that a body has. They can use most perks and skills like normal, though some perks will be unavailable to them. Any perks or skills an AI cannot chose will list that AI's are unable to take them as a prerequisite.

#### Mechs and Holograms

AI Bodies come in two types: Mechs and Holograms. Mechs are further subdivided into Hardmechs and Softmechs.

Holograms are simple holograms projected around a small drone that contains the AI's chip. These bodies are cheap and simple. The Rating and Resolution of a hologram determine how much force the Hologram can sustain and how obviously voxelated it is. These bodies are often used as backups. Hologram bodies do not have an inventory space, nor any character slots not have an inventory space, nor any character slots as they are too weak to actually pick up or carry anything.

Hardmechs are robots through and through. Humanoid machines of steel and iron. They are common in dangerous professions as they are often tougher than their soft counterparts, but they are rarely the body of choice for most individuals. They are distinctly foreign and long term use can cause the Pinocchio effect to be amplified, so AIs will usually avoid using them as a primary body where possible.

Softmechs are robots that appear Terran. These range from vaguely Terran appearing, with simple synth skin with obvious seams all the way to machines that can so accurately mimic Bio-Terrans that they will bleed fake blood if you damage them. Softmechs are also capable of Eating instead of Charging. However when they do this, they loose their innate resistance to vacuum.

#### Ratings and Resolutions

Holograms have both a Rating and a Resolution. Their resolution is measured in Vox and determines how good looking the hologram is. The higher the Vox the better it looks. Due to the way Holograms are projected, they have a voxellated appearance if you look closely enough. The Vox number of a hologram is how many Voxels it can project into a cubic centimetre

The Rating of a hologram, is how much force it can sustain before an object pushes through it. An object

Name	Cost	Resilience	Str	End	Dex	Agi	Slots
Helium Soft-light	100 CR	6 Res	-4	-4	1	3	Emitter, Thruster
Neon Soft-light	500 CR	9 Res	-4	-4	2	3	Emitter, Thruster
Argon Soft-light	1,000 CR	12 Res	-4	-4	2	4	Emitter, Thruster
Krypton Soft-light	2,000 CR	15 Res	-4	-3	3	4	Emitter, Thruster
Xenon Soft-light	5,000 CR	18 Res	-4	-3	3	5	Emitter, Thruster
Radon Soft-light	10,000 CR	21 Res	-4	-3	4	5	Emitter, Thruster
Name	Cost	Resilience	Str	End	Dex	Agi	Slots
Blues Hardmech	500 CR	24 Res	2	3	1	1	2x Arm, 2x Leg, Torso, Head
Pop Hardmech	1,000 CR	48 Res	2	3	2	1	2x Arm, 2x Leg, Torso, Head
Techno Hardmech	2,000 CR	72 Res	2	3	3	2	2x Arm, 2x Leg, Torso, Head
Hip-hop Hardmech	5,000 CR	96 Res	3	3	3	2	2x Arm, 2x Leg, Torso, Head
Jazz Hardmech	10,000 CR	120 Res	3	4	4	2	2x Arm, 2x Leg, Torso, Head
Rock 'n' roll Hardmech	15,000 CR	144 Res	3	4	4	3	2x Arm, 2x Leg, Torso, Head
Name	Cost	Resilience	Str	End	Dex	Agi	Slots
Cotton Softmech	1,000 CR	15 Res	1	2	3	1 1	2x Arm, 2x Leg, Torso, Head
Nylon Softmech	2,000 CR	30 Res	1	2	3	1 2	
							2x Arm, 2x Leg, Torso, Head
Polyester Softmech	5,000 CR	45 Res	2	2	3	3	2x Arm, 2x Leg, Torso, Head
Velvet Softmech	7,000 CR	60 Res	2	3	3	3	2x Arm, 2x Leg, Torso, Head
Silk Softmech	10,000 CR	75 Res	2	3	4	4	2x Arm, 2x Leg, Torso, Head
Satin Softmech	15,000 CR	90 Res	3	3	4	4	2x Arm, 2x Leg, Torso, Head
nushing through a he		as the belogue					

pushing through a hologram will cause the hologram to seemingly shatter around the object until it is removed, and is thus known as shattering. The rating of a Hologram is measured in newtons, as it is a measure of force. Holograms typically have quite low ratings and high resolutions.

#### Upgrading a Body

AI's bodies are Robots, and as such, they can be customised. This is done with upgrades. Upgrades are replacement parts that are superior in quality to the original base body of the AI. Unfortunately, only so much customisation is available to AI, and meaning that an AI can only push their body so far, so sometimes the best approach, is acquiring another body. bodv.

As Upgrades are generally replacement parts, they must be installed into sockets that can fit them. For example, a body cannot support two heads at once.

An AI Body is only a core. By default, all Mech type bodies will come with two basic arms, legs, and a basic head. However, these can be replaced. As each one takes up a socket, removing one of these frees up the socket for you to install a different Upgrade.

Hologram type bodies can only socket Emitters and Thrusters and will come with these two modules by default.

Removing or Installing an Upgrade takes 1 hour of work, and cannot be done from the body in question. Replacing an Upgrade, takes 2 hours of work.

#### Character Creation

When creating an AI Character, you can choose one of two bodies to start with for free: The Blues Hardmech or the Cotton Softmech.

You may then spend either Credits, or SP on Upgrades to your body, replacing the existing ones. You must follow all other rules for AI bodies, so you may only apply Upgrades that you have a free socket for. As always, no upgrade can increase a Stat beyond 5 or bellow -4.

UPGRADES

Upgrades will be listed in the following format:

**NAME OF THE UPGRADE** Slot: The slot the Upgrade takes. Cost: The cost in SP or Cr of the upgrade. *Description of the Upgrade.* The mechanical effect of the Upgrade. Expansions: Any Slots on the Upgrade.

The upgrades listed here are sorted into categories based on which bodies they can be applied to: Softmechs, Hardmechs, Mechs, and Holograms. Upgrades listed under Mechs, can be applied to both Softmechs or Hardmechs.

#### Softmech Upgrades

**Basic Softmech Head** 

Slot: Head Cost: 0 SP, 0 Cr A basic Softmech Head with visible synthskin plates. This simple head provides for basic functionality. Its Eyes and Ears are hard wired and cannot be removed for upgrading. Expansions: None

#### **Basic Softmech Arm**

Slot: Arm Cost: 0 SP, 0 Cr A basic Softmech Arm with visible synthskin plates. This simple arm provides for basic functionality. Expansions: None

### **Basic Softmech Leg**

Slot: Leg Cost: 0 SP, 0 Cr *A basic Softmech Leg with visible synthskin plates.* This simple leg provides for basic functionality. Expansions: None

ЧЛ

#### Dextro-01

Slot: Arm Cost: 100 Cr, 50 SP A Softmech Arm with visible synthskin plates. The Dextro-01 has improved Dexterity over the basic model. Dexterity +1, Agility -1. Expansions: None

### Agilo-01

Slot: Arm Cost: 100 Cr, 50 SP A Softmech Arm with visible synthskin plates. The Agilo-01 has improved Dexterity over the basic model. Agility +1, Dexterity -1. Expansions: None

#### Stronko-01

Slot: Arm Cost: 100 Cr, 50 SP A Softmech Arm with visible synthskin plates that shift and form gaps when the arm is flexed. Strength +1, Endurance -1. Expansions: None

#### Stamo-01

Slot: Arm Cost: 100 Cr, 50 SP A Softmech Arm with visible synthskin plates, connected by rubber seals. Endurance +1, Strength -1. Expansions: None

#### Dextro-02

Slot: Arm Cost: 1,000 Cr A Softmech Arm with visible synthskin plates. The Dextro-02 has improved Dexterity over the basic model. Dexterity +2, Agility -1. Expansions: None

### Agilo-02

Slot: Arm Cost: 1,000 Cr A Softmech Arm with visible synthskin plates. The Agilo-02 has improved Dexterity over the basic model Agility +2, Dexterity -1. Expansions: None

### Stronko-02

Slot: Arm Cost: 1,000 Cr A Softmech Arm with visible synthskin plates that shift and form gaps when the arm is flexed. Strength +2, Endurance -1. Expansions: None

### Stamo-02

48

Slot: Arm Cost: 1,000 Cr A Softmech Arm with visible synthskin plates, connected by rubber seals. Endurance +2, Strength -1. Expansions: None

### **Touchsense Pro**

Slot: Arm Cost: 2,500 Cr Arms equipped with advanced sensors, capable of better detecting textures and temperature. Grants advantage on touch based Perception checks. Expansions: None

Face Plus Slot: Head Cost: 500 Cr A Good face sometimes comes with eyes. This one doesn't always though. This basic Softmech head provides proper eye sockets allowing for visual upgrades. Expansions: 2x Eye

Face Pro Slot: Head Cost: 500 Cr This Head comes with specifically designed internals that allow it to slot in Ear upgrades. This basic Softmech head provides proper ear replacement sockets. Expansions: 2x Ear

# **Cybrain** Slot: Head

Cost: 1,500 Cr A Softmech Head coated in life-like Emu-skin and is difficult to tell apart from the biological counterpart. This Softmech head provides both Ear and Eye replacement sockets. Expansions: 2x Ear, 2x Eye

**Leap-o-matic** Slot: Leg Cost: 100 Cr, 50 SP *A springloaded leg. The springs are visible through the synthskin plating covering this.* Strength +1, Agility -1 Expansion: None

### Hardmech Upgrades

**Basic Camera Face** 

Slot: Head Cost: 0 SP, 0 Cr A basic Hardmech head that looks like a security camera with two antennae. This simple head provides for basic functionality. Expansions: None

#### **Basic Machine Arm**

Slot: Arm Cost: 0 SP, 0 Cr *A basic Hardmech arm coated in metallic plates.* This simple arm provides for basic functionality. Expansions: None

#### **Basic Machine Leg**

Slot: Leg Cost: 0 SP, 0 Cr *A basic Hardmech leg coated in metallic plates.* This simple leg provides for basic functionality. Expansions: None

# Dex-tronic Slot: Arm

Cost: 100 Cr, 50 SP A Hardmech arm coated in metallic plates. The Dex-tronic has improved Dexterity over the basic model. Dexterity +1, Agility -1. Expansions: None

# Agilimentus Slot: Arm

Cost: 100 Cr, 50 SP A Hardmech arm coated in metallic plates. The Agilimentus has improved Agility over the basic model. Agility +1, Dexterity -1. Expansions: None

### Strong-arm

Slot: Arm Cost: 100 Cr, 50 SP A Hardmech arm coated in metallic plates with visible pneumatics. Strength +1, Endurance -1. Expansions: None

# Endurabi Slot: Arm

Cost: 1,000 Cr A bulky Hardmech arm with double reinforced joints. Endurance +1, Strength -1. Expansions: None

#### Dex-tronic-2

Slot: Arm Cost: 1,000 Cr A Hardmech arm coated in metallic plates. The Dex-tronic has improved Dexterity over the basic model. Dexterity +2, Agility -1. Expansions: None

Agilimentus the second Slot: Arm Cost: 1,000 Cr A Hardmech arm coated in metallic plates. The Agilimentus has improved Agility over the basic model. Agility +2, Dexterity -1. Expansions: None

**Strong-arm-2** Slot: Arm Cost: 1,000 Cr *A Hardmech arm coated in metallic plates with visible pneumatics.* Strength +2, Endurance -1. Expansions: None

# 2Endurabi Slot: Arm

Cost: 1,000 Cr A bulky Hardmech arm with double reinforced joints. Endurance +2, Strength -1. Expansions: None

#### Monocularit

Slot: Head Cost: 1,000 Cr A security camera for a face? More likely than you'd think. A basic security camera style head, with one replaceable Eye socket. Expansions: Éye

### Binocularit

Slot: Head Cost: 2,000 Cr Two security cameras for a face? Less likely than you'd think. A basic mechanised head with two Eye sockets Expansions: 2x Eye

#### Trinocularit

Slot: Head Cost: 3,000 Cr Three security cameras for a face? Are you jokester? A security camera style head, with three replaceable Eye sockéts. Expansions: 3x Eye

### Mech Upgrades

# Incomprehensible Oil Slot: Torso Cost: -50 SP You have replaced your regular boring Oil with special incomprehensible Oil. This has made everything worse. Why did you do this? -1 Endurance, -1 Strength Costs 100 XP to remove. Expansions: None

Cryptic Grease Slot: Torso Cost: -50 SP After several hours of doom scrolling you found a real Life Hack Video. Surprisingly it worked... for a week. Was this a mistake? -1 Dexterity, -1 Agility. Costs 100 XP to remove. Expansions: None

#### Germanium Eye

Slot: Eye Cost: 500 Cr A seemingly solid metal plate covers this eye, but at least it can be painted to look normal. Grants thermal Vision. Expansions: None

#### **Vibration Module**

Slot: Torso Cost: 500 Cr A small vibration sensor clad in vibration dampening rubber. A strange design really. Grants Vibrosense:[5] Expansion: None

**Pin Legs** Slot: 2x Leg Cost: 2,000 Cr A longer than normal Legs that tapers to a small point instead of having a foot. Agility +1. Removes character slot "Feet". Expansion: None

AquaJet Slot: 2x Leg Cost: 1,000 Cr An Aquatic capable legs with a small impeller embedded in the lower calf. Swimming Speed +2, Resilience -4 Expansion: None

#### **Basic Ear**

Slot: Ear Cost: 10 Cr *It's just an antenna.* An antenna. It fills an unused ear socket. Expansions: None.

### **Basic Eye**

Slot: Eye Cost: 10 Cr It's just a camera. A camera. For filling unused Eye sockets. Expansions: None.

#### **Precision Optics**

Slot: Eye Cost: 1,500 Cr An eye with improved lenses and better zoom. Advantage on Perception checks based on sight. Does not stack if equipped twice. Expansions: None

### Hologram Upgrades

**Class 5 Emitter Crystal** Slot: Emitter Cost: 0 SP, 0 Cr *A cheap and cheerful crystalline Hologram Emitter.* 200 Vox Resolution. Expansions: None.

**Class 8 Emitter Crystal** Slot: Emitter Cost: 500 Cr *An expensive, high quality Emitter Crystal.* 1,000 Vox Resolution. Expansions: None.

**D-23 Hologram Core** Slot: Thruster Cost: 0 SP, 0 Cr *A simple set of thrusters and hologram backing system* Rating 15 N Expansions: None.

**X-3 Hologram Core** Slot: Thruster Cost: 500 Cr *An Industrial Strength set of thrusters and hologram backing system.* Rating 50 N Expansions: None.
